**Legal notice and disclaimer.** SEVEN-G is a reference methodological framework provided "as is" and for information purposes only. It does not constitute legal, regulatory, financial or professional advice, nor does it guarantee compliance with any law or standard. References to general regulation (such as the EU AI Act, the GDPR, DORA or NIS2), to technical standards and to regulation specific to each sector or jurisdiction may be incomplete, may not apply to a particular case or may become out of date as a result of regulatory changes, interpretations or supervisory positions after their consultation date. **Each organisation that uses SEVEN-G is solely responsible for identifying the regulation that applies to it, verifying that it is current and certifying its own regulatory compliance**, with the appropriate qualified advice. This methodology is a generic, free aid shared with the community so that nobody has to start from scratch; each person or organisation can and should adapt it to its own use. It must not be inferred that its legally sensitive parts have been reviewed by legal counsel: those reviews, for each company or sector, are the ultimate responsibility of the company, consultant or organisation that uses it. Although every effort is made to keep it up to date, some regulation may have changed without being reflected here. To the fullest extent permitted by law, the author accepts no responsibility whatsoever for the effects of its application in any organisation or for its full applicability. The methodology does not grant certification of any kind. The author accepts no liability for any use made of this content or for any decisions taken on the basis of it. The data, figures, companies and cases in the examples are fictitious or illustrative.

Indicator catalogue. It is not implemented in full: the company chooses a reduced set in C2 (section 19, minimum set for Lite; section 20, selection for the board) and consults the rest when needed.

Obligation matrix and layered reading (document 94)

## 01

# Purpose and scope

This document establishes the SEVEN-G indicator catalogue. Each indicator has a persistent code, a definition, a formula, a unit, a data source, a frequency, an owner, the level at which it is used, its application in the cycle and, where appropriate, an indicative threshold.

The catalogue:

- Applies the measurement rules in document 40 and uses its official formulas (F1–F10).
- Includes the funnel metrics in document 03 §3.5 and the eight transformation index signals in document 00 §5.3.
- Feeds the initiative register (T01), value tracking (T12), the cost calculator (T13), the transformation index (T14), the maturity diagnosis (T15) and the board dashboard (T17).
- Marks a **recommended minimum set for Lite intensity**.

No company needs all the indicators. They are selected in C2 according to the AI thesis, the portfolio and the intensity, and the selection is recorded.

## 02

# Rules of use

1. **Persistent code.** The code `IND-<FAMILIA>-NN` is not reused. A retired indicator is marked as retired and keeps its code.
2. **Every formula is explicit.** If an indicator cannot be calculated with its formula, it is shown as "no data" (rule 8 in document 40). It is not replaced by an approximation without saying so.
3. **Thresholds are set by the company.** "To be set" means that the company approves it in C2 (document 13). The only thresholds shown as a value are those derived from rules of the framework itself (for example, zero systems in production without a *gate*) or the indicative time limits in 03 §3.6. None is a market benchmark.
4. **Value indicators inherit the status.** Every indicator calculated on amounts shows its validated proportion or is calculated in two versions: total and validated only.

- 5. **Segmentation.** All portfolio indicators can be segmented by the tags of the controlled taxonomy (03 §3.3): sphere, ambition, intensity, technology, exposure, regulatory classification, area and supplier.
- 6. **Medians rather than means** for times, with the 80th percentile.
- 7. **Reading in pairs.** Speed or automation indicators are read together with the quality and risk indicators that balance them (for example, containment with ungrounded responses and complaints).
- 8. **New indicators.** They are added using the record in section 5 and approved by the AI Office with management control clearance.

03

Legend

| Column                       | Values                                                                                                                                                                                                                                                                                              |
|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Freq. (frequency)            | M monthly · Q quarterly · H half-yearly · A annual · G at each gate or event                                                                                                                                                                                                                        |
| Resp. (owner)                | SP sponsor · BO business owner of the benefit · PO AI Product Owner · TO technical owner · OO operations owner · RO risk owner · AUD AI Auditor · AIO AI Office · MC management control · AIC AI Committee · ISEC information security · DO data owner · PPL people function · BS board secretariat |
| Level                        | I initiative · P portfolio · Co company · B board                                                                                                                                                                                                                                                   |
| Application                  | Phases F0–F7, gates G0–G7, stages C1–C5, spheres E01–E09 and ambition Opt (Optimise), Aug (Augment), Tra (Transform). "All" if it applies generally.                                                                                                                                                |
| Source                       | Tool from document 03 (T01–T22) and, where one exists, board dashboard (T17) field in backticks.                                                                                                                                                                                                    |
| Lite                         | • part of the recommended minimum set for Lite (section 19).                                                                                                                                                                                                                                        |
| To be defined by the company | The source document of the indicator does not set that item; the company approves it in C2 when it selects the indicator (section 21).                                                                                                                                                              |

## 05

# Indicator record

Each indicator in the catalogue, and any in-house indicator added by the company, is documented with this record. The selection of indicators approved by the company in C2, with its target, threshold, frequency, owner and source, is recorded in P35 §13.

| Field               | Content                                                                                  |
|---------------------|------------------------------------------------------------------------------------------|
| Code                | IND - <FAMILIA> - NN                                                                     |
| Name and definition | What it measures, in one understandable sentence.                                        |
| Formula             | Numerator, denominator, exclusions and the applicable official formula from document 40. |
| Unit                | €, %, days, no., points, index.                                                          |
| Source              | Tool, field and source system.                                                           |

| Field                 | Content                                                                       |
|-----------------------|-------------------------------------------------------------------------------|
| Frequency             | Frequency of calculation and review.                                          |
| Owner                 | Who calculates it and who is accountable for the result.                      |
| Level                 | Initiative, portfolio, company or board.                                      |
| Application           | Phase, stage, sphere and ambition.                                            |
| Threshold             | Value approved in C2 or "to be set"; traffic-light reading where appropriate. |
| Counterpart indicator | Indicator with which it must be read.                                         |
| Status                | Active, in testing or retired; date of registration.                          |

# Recommended minimum set for Lite

A company that applies SEVEN-G with Lite intensity should start with these 26 indicators. They cover the ten measurement rules, control of the funnel, the risks that give rise to critical nonconformities and the first two transformation signals.

| Family | Indicators                     | Question they answer                                                                                                              |
|--------|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| Value  | IND-VAL-01, 05, 08, 10, 14, 15 | Does it deliver net value, how much is validated, is it realised, where should we invest and which use cases are not sustainable? |
| Cost   | IND-COS-01, 05, 06, 11         | How much does each use case and AI as a whole cost, and is consumption under control?                                             |
| Funnel | IND-EMB-02, 08                 | Are there stuck initiatives or unmet conditions?                                                                                  |

| Family              | Indicators                 | Question they answer                                                                                                       |
|---------------------|----------------------------|----------------------------------------------------------------------------------------------------------------------------|
| Agility             | IND-AGI-01, 02             | How long do we take to approve and to move into production?                                                                |
| Risk and compliance | IND-RIE-01, 02, 07, 09, 10 | Do we know what AI we have, is all of it approved, what incidents are there, is it reviewed and is there unauthorised use? |
| Operations          | IND-OPE-01                 | Do the systems perform within what was approved?                                                                           |
| Adoption and people | IND-ADO-03, 05             | Is it used and is the workforce trained?                                                                                   |
| Transformation      | IND-TRA-01, 02             | Do we invest and obtain value beyond efficiency?                                                                           |
| Maturity            | IND-MAD-01                 | Where are we?                                                                                                              |
| Board               | IND-CON-02                 | Are the board's recommendations being implemented?                                                                         |

When an initiative moves to Enterprise, at least risk indicators IND-RIE-03, 04 and 11 are added and, depending on the technology, those in sections 11.2 to 11.4.

## 20

# Selection for the board dashboard

The board dashboard (T17) does not show the entire catalogue. The selection is approved in C2 and should include:

- Value:** IND-VAL-01, 04, 05, 06, 07 and 15, with the validated proportion alongside each total (document 40 §11).
- Cost:** IND-COS-11 and, per use case, IND-COS-01.
- Agility:** IND-AGI-01, 02 and 04, segmented by risk and ambition.
- Risk:** IND-RIE-02, 03, 07, 09 and 10.
- Agents:** IND-OPE-11 to 14 when there are A2 or A3 agents.
- Adoption:** IND-ADO-01 and 05.
- Transformation:** IND-TRA-01 to 09 once a year.
- Board:** IND-CON-01 to 03.

# Mapping of provisional codes

Documents 10, 50, 51 and 52 use provisional indicator codes. This table maps them to the **IND-** code in the catalogue. "Complementary" indicates that the catalogue indicator measures the opposite (for example, overdue versus on time); "related" indicates that it covers it in part; "added" indicates that the indicator, which had no equivalent, has been added to the catalogue with the name, formula, source, frequency and threshold of its source document, and with "To be defined by the company" for the items that document does not set. When two provisional codes measure the same thing (IE03.06 and PER-14, IE05.05 and DAT-10, IE06.02 and CNC-06), they share a code. The provisional knowledge codes in document 51 use the **CNC-** prefix so that they are not confused with the **IND-CON** family (board).

## 21.1 Indicators by sphere (document 10)

| Provisional code | Indicator                                | Catalogue equivalent                              |
|------------------|------------------------------------------|---------------------------------------------------|

|---------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 0.1     | 16-09-2026 | First version. Catalogue of 156 indicators in 13 families with code, formula, unit, source, frequency, owner, level, application and indicative threshold; Lite minimum set of 26 indicators; indicative selection for the board dashboard. Consistency adjustments with 01 (segregation of duties in Lite, R6 outcomes, agent criterion) and with 34 and 37; mapping of provisional codes from documents 10, 50, 51 and 52 (section 21). The 47 provisional indicators that had no equivalent added to the catalogue (families EMB, RIE, OPE, ADO, DAT and CLI, and new family PRO · Processes and decision-making, section 18); provisional knowledge prefix in document 51 renamed from CON- to CNC-. |
| 0.1     | 18-09-2026 | Three new operations indicators (159 in total): IND-OPE-24 queries outside the validated scope (usage drift), IND-OPE-25 unequal responses in counterfactual pairs (bias in generative AI) and IND-OPE-26 cost-driven degraded mode; correspondence with OPE-18 to OPE-20 in document 52.                                                                                                                                                                                                                                                                                                                                                                                                                |
| 0.2     | 01-10-2026 | Three indicators of the cost of governance itself (162 in total): IND-COS-12 governance hours per initiative, IND-COS-13 cost of governance over investment with targets by intensity and IND-COS-14 referenced evidence. The time of each gate is already measured by IND-AGI-04.                                                                                                                                                                                                                                                                                                                                                                                                                       |
