TEMPLATE P64 · DATASET RECORD AND KNOWLEDGE SOURCE INVENTORY

Dataset record and knowledge source inventory

Catalogues each dataset and each knowledge source used by AI with its owner, legal basis, quality and validity, and maps the critical knowledge that depends on a few people together with its capture plan.

Fernando García Varela Version 0.1 (working draft) 19-09-2026 Draft for review

Legal notice and disclaimer. SEVEN-G is a reference methodological framework provided "as is" and for information purposes only. It does not constitute legal, regulatory, financial or professional advice, nor does it guarantee compliance with any law or standard. References to general regulation (such as the EU AI Act, the GDPR, DORA or NIS2), to technical standards and to regulation specific to each sector or jurisdiction may be incomplete, may not apply to a particular case or may become out of date as a result of regulatory changes, interpretations or supervisory positions after their consultation date. **Each organisation that uses SEVEN-G is solely responsible for identifying the regulation that applies to it, verifying that it is current and certifying its own regulatory compliance**, with the appropriate qualified advice. This methodology is a generic, free aid shared with the community so that nobody has to start from scratch; each person or organisation can and should adapt it to its own use. It must not be inferred that its legally sensitive parts have been reviewed by legal counsel: those reviews, for each company or sector, are the ultimate responsibility of the company, consultant or organisation that uses it. Although every effort is made to keep it up to date, some regulation may have changed without being reflected here. To the fullest extent permitted by law, the author accepts no responsibility whatsoever for the effects of its application in any organisation or for its full applicability. The methodology does not grant certification of any kind. The author accepts no liability for any use made of this content or for any decisions taken on the basis of it. The data, figures, companies and cases in the examples are fictitious or illustrative.

Why it matters. An AI system is only as reliable as the data it learns from and the sources it answers from. If a dataset has no owner, legal basis or measured quality, the use case cannot be defended before an auditor or a regulator; if a knowledge source has no owner or review date, the assistant will end up citing out-of-date documents to customers or employees. And if critical knowledge depends on two people, their departure paralyses processes and systems. This template gives each asset an owner and a date, and makes it possible to measure DAT-02, CNC-01, CNC-06 and CNC-07.

01

Instructions for use

Aspect	Guidance
When it is used	Dataset records (sections 3 to 5): phase 3 assessment with real data and full record in phase 4; versioned when datasets are frozen in phase 5. Source inventory (sections 6 and 7): phase 4, before each source is connected, and at each validity review. Dependence map and capture plan (sections 8 and 9): at C1 and at C5.
Who completes it	Records: AI Technical Owner with the data owner and the data custodian. Sources: content or knowledge owner. Map and plan: the AI Office coordinates with the areas that own each domain, with the people function (document 50).
Who verifies it	AI Office in Lite; AI Auditor in Enterprise. The data protection officer reviews the personal data and legal basis fields; the AI Risk Owner assesses the RT-DAT risks.
Who decides or approves	The data owner authorises use for the use case at G3. The *gate* is decided by the body in 01 §7.5. The capture plan is approved by the AI Committee at C1.
Stage, *gate* or moment	G3 (data available, quality and legal basis), G4 (lineage and records), G5 (frozen datasets, cleaned sources), R6 (validity); C1 and C5 for the dependence map.
Tool	The company's data catalogue, if there is one; system attributes in T02. There is no dedicated tool (51 §15).
Reference document	Document 51 (§4.2, §4.3, §4.5, §8, §10.1–10.6); P16 for the lineage that uses these records.

Aspect	Guidance
Lite versus Enterprise	Lite may omit the fields marked **(Enterprise)**. In high-risk systems all fields are completed, regardless of intensity.

Completion rules:

- **No data without an owner** and **no source without a content owner** (51 §3, principles 1 and 7).
- If the company already has a data catalogue, the record is implemented as an extension of that catalogue and is only linked here.
- Dataset (CD-NN) and source (F-NN) identifiers are the same as those used in P16; knowledge sources are numbered FC-NN and critical domains DC-NN.
- Quality is measured on real data, with thresholds set per use case in phase 3.
- This template does not constitute legal advice. The legal basis is validated by data protection.

02

Identification

Field	Content	Guidance
Use case code		IA-AAAA-NNN (T01). Not applicable to the dependence map.
AI systems		SIA-AAAA-NNN (T02, P05).
Regulatory classification		P11.
Intensity		Lite · Enterprise.
Reference in the corporate data catalogue		If there is one.
Document version, author and date		DD-MM-AAAA.

03

Dataset record

One record per dataset used to train, fine-tune, validate, test or feed an AI system in production (51 §4.2).

Field	Content	Guidance
Identifier and name		CD-NN, the same as in P16.
Owner (business) and custodian (technology)		Name and function.
Description and origin		What it contains, which systems it comes from and how it was generated.
Use		Training · Fine-tuning · Validation · Testing · Knowledge base · Inference · Monitoring.
Period covered and volume		Dates and number of records.
Personal data		Yes · No. Categories; special categories; minors.
Review by the data protection officer		Date and result.
Legal basis and authorised purposes		By purpose (GDPR , Art. 6); compatibility analysis if the purpose is new (Art. 6.4).
Justification for each personal attribute used as a variable (Enterprise)		Minimisation (51 §4.4).
Use and confidentiality restrictions		Contractual, licensing, sectoral or territorial; information classification.
Retention		Period and rule for deletion or anonymisation (51 §4.5).
Systems that use it		Use cases and model versions; link to P16 and T02.
Version and freeze date		Mandatory if it was used for training.
Synthetic data		Yes · No. If Yes, source dataset, generation method and version; utility and privacy validation (DAT-11). Until shown otherwise, they are treated as personal data.

(Illustrative example) CD-01 · Maintenance work order history 2023–2025 · owner: head of maintenance · custodian: data platform team · 180,000 records · no personal data after pseudonymising the technician identifier · authorised purpose: estimate the probability of failure · frozen at version 3 on 15-11-2026.

04

Quality by dimension

Thresholds set in phase 3; they become monitoring controls in P25.

Dimension	Rule applied	Threshold	Result	Measurement date	Sufficient · With actions · Insufficient
Accuracy					
Completeness					
Consistency					
Timeliness					
Validity					
Uniqueness					
Representativeness					
Label quality					
(illustrative example) **Completeness**	Proportion of nulls in the failure code	≤ 5%	4%	20-10-2026	Sufficient

05

Representativeness and known biases

Mandatory in high-risk systems (51 §6); **(Enterprise)** for the rest.

Field	Content	Guidance
Population and contexts of use of the system		Geographical, behavioural, contextual or functional.
Populations covered and under-represented		Distribution by segment against the population of use.
Known biases and measures		Link to the tests in P22 and the risks in P12.

Field	Content	Guidance
Use of special categories to detect bias		Only with a decision documented with the data protection officer and safeguards (51 §9.4); reference to P11.

06

Knowledge source inventory

One row per source used by a generative AI system through retrieval (51 §10.1).

No.	Source	Content owner	Indexed scope and exclusions	Content type	Authority	Classification and source permissions	Validity (review every)	Index update
FC-01 ***(illustrative example)***	Document space for customer service procedures	Head of service quality	Procedures in force; drafts and minutes excluded	Procedure	Official	Internal; permissions by team	6 months	Daily
FC-01				Internal regulation · Procedure · Product · Technical · Legal · Commercial · Historical	Official · Supporting · Informative			Continuous · Daily · Weekly

07

Admission, curation and permissions for each source

A source **should not** be connected if any admission check fails (51 §10.2).

Source	Has an owner	What is in force can be identified	Does not mix drafts and old versions	Permissions transferable to retrieval	Personal data and third parties analysed	Initial clean-up before G5	Permission filtering at retrieval tested	Last validity review
FC-01	Yes · No	Yes · No	Yes · No	Yes · No	Yes · No	Date	Date and result	Date

Field	Content	Guidance
Maximum permission synchronisation period		Monitored (51 §10.4).
Review of excessive inherited permissions before connecting		Date and result.
Content validity (CNC-02) and use of out-of-date content (CNC-03)		Latest value.
Queries without a relevant source (CNC-08) (Enterprise)		Gaps detected and content created or improved.

08

Knowledge dependence map

Corporate; prepared at C1 and reviewed at C5 (51 §10.6, steps 1 and 2).

No.	Critical domain	Owning area	People who master it	Usable documentation (Yes · Partial · No)	Departure risk within the thesis horizon	Dependent? (≤ 2 people and no documentation)
DC-01 ***(illustrative example)***	Set-up and failures of a legacy production line	Technical department	2	Partial	High (retirement within 18 months)	Yes
DC-01					Low · Medium · High	

Indicator	Value	Formula
CNC-06 · Critical knowledge dependence		Dependent domains ÷ critical domains.

09

Capture plan

For the prioritised domains (51 §10.6, steps 3 to 6).

Domain	Capture method	Participating experts and informed consent	Owner	Target date	Second reviewer and validation date	Resulting governed source (FC-NN)	Status
DC-01 ***(illustrative example)***	AI-assisted structured interviews and review of 30 resolved failures	Two technicians, informed voluntary participation recorded	Technical department	30-06-2027	Pending	FC-07	In progress
	Interviews · Recording · Case review · Documentation of decisions						Pending · In progress · Validated · Available

Indicator	Value	Formula
CNC-07 · Capture coverage		Dependent domains with captured and validated content ÷ dependent domains.

Capture is carried out with informed voluntary participation and recognition of the expert, and is not used as a prior step to dispensing with the person without assessing the effect in accordance with document 50.

10

Quality criteria

Formal criteria in document 21 (G3.02, G3.03 and G4.03); DAT and CNC indicators in document 51 §12.

#	Check	Status
1	Each dataset has an owner, a custodian, a legal basis per purpose and restrictions.	Met · Not met · Not applicable · Pending
2	Quality has been measured with real data against thresholds per dimension.	
3	Datasets used for training are versioned and frozen.	
4	Synthetic data are marked and validated for utility and privacy.	
5	In high-risk systems, representativeness and known biases are recorded.	

#	Check	Status
6	Each knowledge source has an owner, authority, validity and permissions, and passed admission.	
7	Permission filtering is applied at retrieval and has been tested.	
8	The dependence map and the capture plan are up to date at C1 or C5.	

11

Approval and verification

Function	SEVEN-G role	Name and position	Date	Signature or reference
Prepares the records	AI Technical Owner			
Authorises use of the dataset	Data owner			
Reviews personal data and legal basis	Data protection officer			
Maintains the source inventory	Content or knowledge owner			
Verifies	AI Office (Lite) · AI Auditor (Enterprise)			
Approves the capture plan	AI Committee (C1)			

Segregation of duties: whoever prepares the record does not verify it; the data owner authorises use but does not validate their own quality without the measurement in section 4.

12

Version control

Completed document

Version	Date	Author	Changes

Template

Version	Date	Changes
0.1	19-09-2026	First version. Covers the dataset record (51 §4.2), quality by dimension (51 §4.3), the knowledge source inventory and admission (51 §10.1–10.4) and the dependence map with its capture plan (51 §10.6).
