

DOCUMENT 02 · GLOSSARY AND CONVENTIONS

# SEVEN-G glossary and conventions

Terms, scales, codes and drafting rules common to the whole library

**Fernando García Varela**   Version 1.0 (final library version v0.1)   16-09-2026   In force

**Legal notice and disclaimer.** SEVEN-G is a reference methodological framework provided "as is" and for information purposes only. It does not constitute legal, regulatory, financial or professional advice, nor does it guarantee compliance with any law or standard. References to general regulation (such as the EU AI Act, the GDPR, DORA or NIS2), to technical standards and to regulation specific to each sector or jurisdiction may be incomplete, may not apply to a particular case or may become out of date as a result of regulatory changes, interpretations or supervisory positions after their consultation date. **Each organisation that uses SEVEN-G is solely responsible for identifying the regulation that applies to it, verifying that it is current and certifying its own regulatory compliance**, with the appropriate qualified advice. The author accepts no liability for any use made of this content or for any decisions taken on the basis of it. The data, figures, companies and cases in the examples are fictitious or illustrative.

### THE ESSENTIALS

#### Reference

Glossary and codes. It is not read straight through: it is consulted when a term or a code (G, LV, P, T, IND, RT) comes up. Its definitions prevail if another document uses a term differently.

Obligation matrix and layered reading (document 94)

01

## Purpose and use of the glossary

### 1.1 Purpose

This document is the **single source** of SEVEN-G's terms, scales, closed lists, codes and drafting conventions. It brings together the definitions used by the foundational methodology (document 01), the topic documents, templates P01–P31 and tools T01–T22, and sets their official equivalent in English and in Spanish.

Its purpose is to ensure that a given term means the same thing in a phase manual, in a *gate* criterion, in a template, in the initiative register and in the board dashboard. Without a common vocabulary it is not possible to aggregate the portfolio, compare periods or audit decisions.

### 1.2 Rules of use

- 1. **Other documents do not redefine.** Documents, templates and tools use terms with the meaning given in this glossary. They may develop how they are applied, but they may not alter their definition, values or codes.
- 2. **The glossary first.** If a document needs a new term, a new value in a closed list or a change of definition, this glossary is amended first and the decision is recorded. The affected documents are updated afterwards.
- 3. **Closed lists.** The scales in section 4 and the taxonomy in section 5 are closed lists: tools do not accept any other values. The free tags in the register are the only open space.
- 4. **Spanish term.** The last column gives the original Spanish term, so that the glossary serves as a bridge between the two language versions of the library. The English terms are those of the English translation guide.
- 5. **Reference document.** It indicates where the concept is developed. The binding definition is the one in this glossary; the reference document provides the operational detail.

### 1.3 Order of precedence

If two texts in the library give a term different meanings, the following order applies:

| Order | Source                                 | Scope                                                                                                                                        |
|-------|----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| 1     | Document 01 · Foundational methodology | Normative reference of the framework: model, phases, <i>gates</i> , roles, intensity, risks, nonconformities and regulation.                 |
| 2     | This glossary                          | Parameters, scales and codes common to the library, consistent with 01.                                                                      |
| 3     | Topic documents, templates and tools   | Operational development. If they contradict 01 or this glossary, the latter prevail and the topic document is corrected in its next version. |

Regulatory definitions ([EU AI Act](#), [GDPR](#), [DORA](#), [NIS2](#)) are summarised for ease of reading. In case of doubt, the official text of the regulation always prevails, and its validity must be checked (document 34; consulted in September 2026). This document does not constitute legal advice.

### 1.4 AI self-consulting principle

SEVEN-G applies the principle of **AI self-consulting**: the company must be able to govern, measure and correct its use of AI with its own teams, using a common language and verifiable evidence,

without depending on personal interpretations or on a specific supplier.

This principle exists for four practical reasons:

1. **Continuity.** Initiatives last longer than projects and longer than the teams that launched them.
2. **Traceability.** The board, audit and risk functions must understand why each step was decided.
3. **Scalability.** Without stable definitions it is not possible to compare portfolios, periods and business units.
4. **Transferability.** The framework must work even if tools, models or consulting firms change.

This glossary is therefore not an editorial annex: it is management infrastructure. Autonomy does not mean working without external support; it means that control of the method and of the evidence stays within the company.

In line with this principle, SEVEN-G is compatible with in-house or external consulting support and with other corporate frameworks for governance, risk, technology or transformation. It may be applied in full or in a modular way, provided its rules for traceability, verification and accountability are maintained.

## 1.5 Didactic, but not a training course

SEVEN-G documents are **final management documents**, not course material. They must be didactic to read, so as to make correct decisions easier, according to three criteria:

1. **What it is.** A precise, single definition.
2. **Why it matters.** Its relationship with value, risk, compliance or decision-making.
3. **How it is used.** The evidence, *gate* criterion or tool where it applies.

Tools follow the same logic: they do not teach theory; they guide the application of the framework with closed lists, validations and evidence records.

From this version onward, whenever a new concept is introduced (including a template, document or tool), it **must** include an explanatory zone labeled "**Why it matters**", explicitly stating its practical relevance for decision-making, risk, compliance or measurement.

# Normative language and drafting conventions

## 2.1 Normative language

| Term          | Meaning                | Consequence                                                                                          | Spanish |
|---------------|------------------------|------------------------------------------------------------------------------------------------------|---------|
| <b>must</b>   | Mandatory requirement. | Failure to comply is a nonconformity (section 4.13).                                                 | debe    |
| <b>should</b> | Recommendation.        | May be omitted if justified and recorded. Omitting it without justification is an audit observation. | debería |
| <b>may</b>    | Permitted option.      | No justification required.                                                                           | puede   |

Negative forms follow the same logic: **must not** prohibits; **should not** advises against, with the possibility of justification. Expressions such as "it is advisable", "it is strongly recommended" or "it is necessary" are not used in normative text, because they do not make clear whether there is an obligation.

## 2.2 Drafting

- **Language and tone.** Spanish from Spain in the original version and international English with British spelling in the English version; formal, clear and without a commercial tone. Short sentences; tables where they organise information better than text.
- **Capitals.** Values of scales and closed lists take an initial capital when used as such: outcomes (*Proceed*, *Pivot*), ambition levels (*Optimise*), statuses (*Met*, *In production*), grades (*Systematic*), risk levels (*High*). In the Spanish version, roles and bodies are written in lower case in running text and with an initial capital in headings, tables and records; the English version keeps the role and body names of the translation guide (AI Committee, AI Risk Owner).
- **Anglicisms.** *Gate* is used in italics as a synonym for decision gate. In the Spanish version, other anglicisms are used only when there is no established equivalent and are shown in italics the first time they appear (*shadow AI*).
- **Acronyms.** They are spelled out the first time they appear in each document, except those in section 8 in general use in the framework (AI, [GDPR](#), EU).
- **Examples.** Any example, case or figure that does not come from a regulation or a verifiable source is marked as *illustrative* or *fictitious*. No client data or recognisable client features are used.
- **Figures.** No market figures, improvement percentages or return references are included without a verifiable source. The framework's thresholds are presented as *indicative* or *to be calibrated* and are set by each company in C2.

- **Regulations.** Only articles and requirements that exist are cited, with the date of consultation when there are recent changes or changes in progress. Every document with regulatory content includes the disclaimer: *"This document does not constitute legal advice."*
- **Diagrams.** Diagrams are not drawn with text characters. The framework's graphic components or Mermaid diagrams are used.
- **Brands.** SEVEN-G is the only framework. SPAD and AECF are cited as related methodologies, not as parallel brands.

## 2.3 Numbers, dates and amounts

| Element                | Convention                                                                                                                 | Example         |
|------------------------|----------------------------------------------------------------------------------------------------------------------------|-----------------|
| Dates                  | DD-MM-YYYY.                                                                                                                | 16-09-2026      |
| Quarters               | Q, quarter number and two-digit year (Spanish version: 3T26).                                                              | Q3 26           |
| Decimals and thousands | Decimal point and comma as thousands separator (Spanish version: decimal comma and thousands point, 150.000,50 €).         | €150,000.50     |
| Currency               | Symbol before the amount; k and M for thousands and millions in tables (Spanish version: symbol after the amount, 250 k€). | €250k           |
| Percentages            | Number followed by the symbol (Spanish version: with a space, 10 %).                                                       | 10%             |
| Ranges                 | En dash without spaces.                                                                                                    | 5–9 · G0–G2     |
| Time limits            | "Days" are calendar days unless "working days" is stated.                                                                  | 10 working days |

## 2.4 Cross-references

| Form               | Meaning                                                       | Example                   |
|--------------------|---------------------------------------------------------------|---------------------------|
| NN §x.y            | Document NN, section x.y.                                     | 01 §7.3                   |
| document NN        | Entire document.                                              | document 40               |
| measurement rule n | Rule n of 00 §6, developed in 40 §3.                          | measurement rule 8        |
| principle n        | Principle n of 01 §3.                                         | principle 7               |
| Code               | Criterion, control, template or tool by its code (section 6). | G3.08 · AG-09 · P12 · T01 |

## 2.5 "No data"

An absent value is written as **"no data"**, never as zero or as an undeclared estimate (measurement rule 8). In scales that score, "no data" scores 0 and is shown as "no data"; in traffic lights it is shown in grey and never as green.

03

# Glossary of framework terms

Alphabetical order by English term. The full scales are in section 4 and the codes in section 6.

## 3.1 A

| Term                           | Definition in SEVEN-G                                                                                                                                                                                                                                                       | Reference document        | Spanish term                    |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------|---------------------------------|
| Action limits                  | Limits of an agent defined in the design and enforced outside the model: amounts per transaction and cumulative, number of actions, recipients, time windows, data volume, iterations and consumption budget.                                                               | 35 §4.5                   | Límites de actuación            |
| Additional net value per euro  | Expected additional annual net value ÷ required additional investment (F3). It is the prioritisation criterion between use cases (rule 9); it is not a feasibility criterion: neither it nor its multiple over the horizon prevents passing G3, where $NPV \geq 0$ applies. | 00 rule 9; 40 F3; 14 §4.2 | Neto adicional por euro         |
| Adversarial testing            | Tests that deliberately try to make an AI system or an agent fail (injection, extraction, tool abuse) in order to check the effectiveness of its controls.                                                                                                                  | 35 §8; 33 §5.3            | Pruebas adversarias             |
| Agent                          | AI system that executes actions on other systems, data or people, or prepares them for human validation, by means of tools and permissions (autonomy A1, A2 or A3). A build tool capable of acting on repositories, environments or systems is also an agent.               | 35 §4–5; 53 §1.3          | Agente                          |
| Agents with the ability to act | Enterprise criterion: system with autonomy A2 or A3 whose actions have an effect on third parties, money, personal data or production systems.                                                                                                                              | 01 §9.2; 35 §5.2          | Agentes con capacidad de actuar |
| AI audit                       | Independent examination of evidence, controls or the framework. Types: <i>gate</i> audit, continuity audit, framework audit of the company, thematic audit and supplier audit; in addition, follow-up audits and re-audits.                                                 | 38 §4; 21 §10             | Auditoría de IA                 |

| Term                       | Definition in SEVEN-G                                                                                                                                                                                                                                                                                                                       | Reference document  | Spanish term                   |
|----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|--------------------------------|
| <b>AI Auditor</b>          | Control role that verifies the evidence at all Enterprise <i>gates</i> and by sampling in Lite, and closes nonconformities. It cannot take part in the design, build or operation of the initiative or report hierarchically to its sponsor. It may come from internal audit or be external.                                                | 01 §8.1; 38 §3      | Auditor de IA                  |
| <b>AI Committee</b>        | Senior management body covering business, technology, data, risk, compliance, security, data protection and people, which manages the portfolio, decides Enterprise <i>gates</i> and retirements, accepts High risks and escalates to the board as appropriate. It meets monthly. It may be an existing committee with an extended mandate. | 01 §8.3; 30 §3.3    | Comité de IA                   |
| <b>AI incident</b>         | Event in which an AI system, through its operation, failure, manipulation or use, causes or may cause harm to people, to the company or to third parties, or interrupts or degrades a process, even if the system remains available. It is classified by severity S1–S4.                                                                    | 37 §1.1; 52 §7.1    | Incidente de IA                |
| <b>AI literacy</b>         | Sufficient level of AI knowledge among staff and other persons who operate or use AI systems on the company's behalf (EU AI Act, Article 4). In SEVEN-G it is a C2 requirement (corporate policy) and evidence for each initiative (capability plan in P20), organised by profiles (PER-PA to PER-PF, document 50 §5.2).                    | 31 §6; 50 §5; 23 §8 | Alfabetización en IA           |
| <b>AI Office</b>           | Internal methodology, portfolio and measurement unit that maintains the inventory, verifies in Lite, consolidates measurement and prepares information for the bodies. It must not be confused with the <a href="#">European AI Office</a> .                                                                                                | 01 §8.3; 30 §1.2    | Oficina de IA                  |
| <b>AI Operations Owner</b> | Building role: accountable for stability, monitoring, incidents and changes in production. It cannot verify evidence of its own operation.                                                                                                                                                                                                  | 01 §8.1             | Responsable de operación de IA |
| <b>AI Product Owner</b>    | Building role: accountable for the value hypothesis, actual use and adoption. It cannot verify evidence or decide <i>gates</i> of its initiative.                                                                                                                                                                                           | 01 §8.1             | Responsable de producto de IA  |
| <b>AI reviewer</b>         | AI tool that reviews plans, code, tests or security within the building team (SEVEN-G name for the SPAD <i>AI Auditor</i> role). It approves nothing and is not the AI Auditor.                                                                                                                                                             | 53 §5               | IA revisora                    |
| <b>AI Risk Owner</b>       | Control role: accountable for the assessment and monitoring of risks and compliance, and issues risk clearance. It cannot be part of the team that builds the initiative.                                                                                                                                                                   | 01 §8.1             | Responsable de riesgos de IA   |

| Term                                                  | Definition in SEVEN-G                                                                                                                                                                                                                                                                                                                    | Reference document  | Spanish term                                               |
|-------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|------------------------------------------------------------|
| <b>AI security control (SEG) · agent control (AG)</b> | Catalogues of coded controls: SEG-01 to SEG-20 for AI systems and AG-01 to AG-20 for agents, with mandatory minimums by autonomy level.                                                                                                                                                                                                  | 35 §5–7             | Control de seguridad de IA (SEG) · control de agentes (AG) |
| <b>AI Sponsor</b>                                     | Deciding role: accountable for value and investment, and champions the initiative before the bodies. It cannot verify evidence or act as risk owner or auditor of its initiative.                                                                                                                                                        | 01 §8.1             | Patrocinador de IA                                         |
| <b>AI supplier (third party)</b>                      | Third party that supplies models, platforms, software with AI features or services that use them, managed with requirement levels N1–N3.                                                                                                                                                                                                 | 36                  | Proveedor de IA (tercero)                                  |
| <b>AI system</b>                                      | Machine-based system that, with varying levels of autonomy, infers from the input it receives how to generate outputs—predictions, content, recommendations or decisions—that can influence physical or virtual environments. It is aligned with the EU AI Act definition and is identified in the inventory with the code SIA-AAAA-NNN. | 01 §4; 32 §2        | Sistema de IA                                              |
| <b>AI system inventory</b>                            | Register of all the company's AI systems of the four usage types (initiatives, embedded third-party AI, corporate use and unauthorised use), with regulatory classification, intensity, autonomy and owner.                                                                                                                              | 01 §14; 32; T02     | Inventario de sistemas de IA                               |
| <b>AI Technical Owner</b>                             | Building role: accountable for the solution, data, models and their technical documentation. It cannot verify evidence or decide <i>gates</i> of its initiative.                                                                                                                                                                         | 01 §8.1             | Responsable técnico de IA                                  |
| <b>AI thesis</b>                                      | Brief statement approved by the board in C2 that explains why AI matters to the company, where it wants to use it, with what ambition and what it will not do. It must be usable to say no to an initiative.                                                                                                                             | 13 §3               | Tesis de IA                                                |
| <b>Ambition lane</b>                                  | Grouping of the portfolio by confirmed ambition level (Optimise, Augment, Transform), with its own budget envelope and prioritisation criteria. Initiatives compete only within their lane.                                                                                                                                              | 14 §4               | Carril de ambición                                         |
| <b>Ambition level</b>                                 | Type of bet of an initiative: Optimise, Augment or Transform. It is not a ladder: they are three bets with different cost, risk, time frame and organisational resistance. Each initiative has a single level.                                                                                                                           | 01 §4; 10 §3; 12 §3 | Nivel de ambición                                          |
| <b>Annual net value</b>                               | Materialised efficiencies + return – recurring cost (F2). Non-materialised released capacity is excluded.                                                                                                                                                                                                                                | 00 rule 6; 40 F2    | Valor neto anual                                           |

| Term                      | Definition in SEVEN-G                                                                                                                                                                                                                                            | Reference document | Spanish term         |
|---------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|----------------------|
| <b>Attribution method</b> | Procedure for isolating the effect of AI: randomised control group, A/B test, difference-in-differences, adjusted before-and-after comparison or, as a last resort, expert estimate. It is approved at G2 and determines the maximum status the value can reach. | 01 §6.4; 40 §7     | Método de atribución |
| <b>Augment</b>            | Ambition level in which people do what they could not do before: roles and capabilities change, not the business. Value combines cost and performance.                                                                                                           | 00 §4.1; 10 §3     | Aumentar             |
| <b>Autonomy level</b>     | Degree to which a system acts without prior human validation of each action, on four levels A0–A3 (section 4.11). The level assigned is the highest of the actions the system <b>can</b> execute, not that of its usual use.                                     | 35 §5              | Autonomía (nivel de) |
| <b>Avoided risk</b>       | Reduction in the likelihood or impact of an adverse event. It is reported separately and only adds up, as an efficiency, when it translates into an observable and attributable lower cost.                                                                      | 40 §5.2            | Riesgo evitado       |

## 3.2 B

| Term                             | Definition in SEVEN-G                                                                                                                                                                                                 | Reference document    | Spanish term                      |
|----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|-----------------------------------|
| <b>Baseline</b>                  | Measurement of the situation without the initiative (cost, time, errors, conversion or another metric) against which the incremental effect is calculated. It must be measured, not estimated, unless justified.      | 01 §6.4; 40 §3.1; P09 | Línea base                        |
| <b>Baseline conditions</b>       | Conditions that do not score in the transformation index but are required by the profiles: B1 governed portfolio, B2 proportion of validated value and B3 scale in production.                                        | 12 §4.3               | Condiciones de base               |
| <b>Benefits realisation plan</b> | Plan signed by the business owner of the benefit, in draft at G3 and complete at G4, that sets out how, when and with which enabling changes the expected value will be materialised.                                 | 43 §4                 | Plan de realización de beneficios |
| <b>Blocking criterion</b>        | <i>Gate</i> criterion with mandatory status <i>Yes</i> or <i>Yes ♦</i> that is <i>Not met</i> or <i>Pending</i> . While any remains, neither <i>Proceed</i> nor <i>Proceed with conditions</i> is possible.           | 21 §5.1               | Bloqueante (criterio)             |
| <b>Board AI dashboard</b>        | Board oversight tool fed by the initiative register: inventory, validated versus declared value, cost, compliance, incidents, exposure to AI-enabled attacks, agents, adoption, agility and distribution by ambition. | 00 §4.6; 60; T17      | Panel de IA del consejo           |

| Term                                 | Definition in SEVEN-G                                                                                                                                                                                                 | Reference document | Spanish term                         |
|--------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|--------------------------------------|
| <b>Board committee</b>               | Committee of the board (audit, risk or technology) that oversees, on a quarterly basis, risks, regulatory compliance, incidents, major and critical nonconformities and AI audits.                                    | 01 §5.2; 30 §3.2   | Comisión delegada                    |
| <b>Board (of directors)</b>          | Body that approves the AI thesis, the ambition, the risk appetite and Transform initiatives (at G2 and when scaling at G7), oversees quarterly and reviews progress annually. It may act through its board committee. | 01 §8.3; 30 §3.1   | Consejo (de administración)          |
| <b>Board recommendation</b>          | Recommendation or request of the board or its board committee with a persistent code REC-AAAA-NNN, recipient, committed date, declared status, evidence and independent assessment.                                   | 62 §3–6; T18       | Recomendación del consejo            |
| <b>Bring G7 forward</b>              | R6 outcome when the initiative shows relevant deviations in value, risk or compliance: G7 is opened without waiting for the calendar.                                                                                 | 01 §7.3; 21 §5.3   | Adelantar G7                         |
| <b>Business owner of the benefit</b> | Executive of the area in which the benefit arises. Signs the realisation plan, executes the materialisation and declares the realised value. Cannot validate their own value. May be the same person as the sponsor.  | 43 §3.2            | Responsable de negocio del beneficio |

### 3.3 C

| Term                           | Definition in SEVEN-G                                                                                                                                                                                                                                                             | Reference document   | Spanish term                    |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------|
| <b>Checklist</b>               | Conversion of the criteria of a <i>gate</i> into binary checks with the same code, plus the cross-cutting lists for evidence (LV-EV) and agents (LV-AG).                                                                                                                          | 22                   | Lista de verificación           |
| <b>Competent body</b>          | Body or role responsible for deciding a <i>gate</i> according to intensity and ambition level.                                                                                                                                                                                    | 01 §7.1, §7.5        | Órgano competente               |
| <b>Compliance (value type)</b> | Ability to meet a regulatory or contractual obligation. It is reported separately and does not add to net value unless it replaces an actual compliance cost measured with a formula; it is then an efficiency.                                                                   | 40 §5.2              | Cumplimiento (tipo de valor)    |
| <b>Condition</b>               | Requirement imposed in a <i>Proceed with conditions</i> outcome, linked to a <i>Conditionable</i> criterion, with a time limit, owner and means of verification. It is checked at the latest at the next <i>gate</i> . An expired unmet condition turns the outcome into Iterate. | 01 §7.3–7.4; 21 §3.2 | Condición; condiciones vencidas |

| Term                                       | Definition in SEVEN-G                                                                                                                                                                                                                                                                                                                                                                                                                               | Reference document        | Spanish term                               |
|--------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------|--------------------------------------------|
| <b>Conditionable criterion</b>             | Mandatory <i>gate</i> criterion whose shortfall is not critical and whose evidence exists, and which therefore allows Proceed with conditions.                                                                                                                                                                                                                                                                                                      | 21 §2.2                   | Condicionable (criterio)                   |
| <b>Context and constraints statement</b>   | Phase 0 evidence that declares the initiative's regulatory, ethical, data, budget and time constraints.                                                                                                                                                                                                                                                                                                                                             | 01 §6.2; P02              | Declaración de contexto y restricciones    |
| <b>Controlled taxonomy</b>                 | Closed lists of initiative register tags (sphere, ambition level, intensity, regulatory classification, technology, exposure, value type and stop or retirement reason) that make it possible to filter, compare and aggregate the portfolio.                                                                                                                                                                                                       | 03 §3.3; section 5        | Taxonomía controlada                       |
| <b>Corporate cycle</b>                     | Company level of the framework: five annual stages with continuous oversight (C1 Diagnosis, C2 Direction, C3 Portfolio, C4 Oversight, C5 Review) through which the board and senior management govern AI.                                                                                                                                                                                                                                           | 01 §5                     | Ciclo corporativo                          |
| <b>Corporate use of general-purpose AI</b> | AI assistants and productivity suites used by employees. It is governed with the inventory, the acceptable use policy, training and technical controls, and moves to the full lifecycle if it meets any Enterprise criterion.                                                                                                                                                                                                                       | 01 §1.2; 31 §5            | Uso corporativo de IA de propósito general |
| <b>Critical control</b>                    | Security, legal compliance or human oversight control that does not admit Proceed with conditions: the <b>Yes</b>  criteria in document 21 and the critical agent controls by autonomy level in document 35. Not designed, it blocks G4; not tested, it blocks G5; disabled in production, it is a critical nonconformity.                                       | 01 §7.3; 21 §2.2; 35 §5.4 | Control crítico                            |
| <b>Critical function</b>                   | Enterprise criterion: the system supports a critical or important business function, or one subject to sector-specific operational resilience regulation.                                                                                                                                                                                                                                                                                           | 01 §9.2; 36 §4.1          | Función crítica                            |
| <b>Current profile · target profile</b>    | In the NIST CSF and the <a href="#">NIST AI RMF</a> , the <b>current profile</b> describes the outcomes (subcategories) that the organisation achieves today and the <b>target profile</b> , those it wants to achieve, prioritised. The difference between them is the gap that becomes an action plan. SEVEN-G expresses the degree of each outcome with the 0–5 maturity scale (section 4.9), not with <i>tiers</i> .                            | 34 §5.3                   | Perfil actual · perfil objetivo            |
| <b><a href="#">Cyber AI Profile</a></b>    | <a href="#">NIST CSF 2.0</a> community profile for AI (NIST IR 8596). It organises the CSF subcategories into three areas —Secure (protecting the components of AI systems), Defend (using AI in cyber defence) and Thwart (thwarting attacks that use AI)— and proposes a priority for each one. As at the consultation date it is a preliminary <b>draft</b> (December 2025): it is used for guidance and does not underpin <i>gate</i> criteria. | 34 §5.3; 35               | Cyber AI Profile                           |

## 3.4 D

| Term                                            | Definition in SEVEN-G                                                                                                                                                                                                                                                                         | Reference document      | Spanish term                                        |
|-------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|-----------------------------------------------------|
| <b>Data protection impact assessment (DPIA)</b> | Assessment required by the GDPR (Article 35) when processing is likely to result in a high risk to the rights and freedoms of individuals.                                                                                                                                                    | 32 §6.1; P11            | Evaluación de impacto en protección de datos (EIPD) |
| <b>Decision gate (<i>gate</i>)</b>              | Point at the end of a phase at which the competent body decides, on verified evidence, whether the initiative proceeds and under what conditions. Gates: G0 Authorisation, G1 Opportunity, G2 Hypothesis, G3 Feasibility, G4 Design, G5 Go-live, R6 Continuity review and G7 Scale or retire. | 01 §4, §7               | <i>Gate</i> (puerta de decisión)                    |
| <b>Decisions about people</b>                   | Enterprise criterion: the system's output significantly influences decisions that affect people (employment, credit, insurance, access to services, among others). Their maximum autonomy is limited by type of decision.                                                                     | 01 §9.2; 50 §8          | Decisiones sobre personas                           |
| <b>Declaration of application</b>               | Statement by a company that it applies SEVEN-G because it meets the minimum conditions of 01 §14. It is a <b>verifiable self-declaration</b> subject to audit, not a certification: in version 0.x there is no official certification of the framework.                                       | 01 §14; 38 §11; 93 §7.3 | Declaración de aplicación                           |
| <b>Declared</b>                                 | Status of the amount assigned by the area responsible for the benefit, with the sponsor's agreement, with formula, source, period and attribution method. Indicative expiry of 6 months without validation.                                                                                   | 01 §11; 40 §4.1         | Declarado                                           |
| <b>Deployer</b>                                 | Under the EU AI Act, a person or entity using an AI system under its authority, except where the AI system is used in the course of a personal non-professional activity (Article 3(4)). It is the usual role of a company that uses third-party AI.                                          | 32 §4                   | Responsable del despliegue                          |
| <b>Direct exposure</b>                          | Enterprise criterion: customers, patients, citizens or other external persons interact directly with the system.                                                                                                                                                                              | 01 §9.2; 03 §3.3        | Exposición directa                                  |
| <b>Dual validation</b>                          | Rule whereby a <i>gate</i> is passed only if tangible results and verified documentation are present at the same time. Results without documentation, or documentation without results, do not pass the <i>gate</i> .                                                                         | 01 §4, §7.2; 21 §3.1    | Validación dual                                     |

### 3.5 E

| Term                                   | Definition in SEVEN-G                                                                                                                                                                                                                                                                 | Reference document | Spanish term                       |
|----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|------------------------------------|
| <b>Efficiencies</b>                    | Additive value type: lower actual cost or budgeted avoided cost, incremental and with a formula. Only materialised efficiencies count; to be validated they require an accounting reflection or evidence of the avoided cost.                                                         | 00 rule 6; 40 §5.1 | Eficiencias                        |
| <b>Enterprise criteria</b>             | Eight criteria, any one of which determines Enterprise intensity: high regulatory risk, decisions about people, direct exposure, agents with the ability to act, specially protected data, critical function, Transform level and investment above the C2 threshold.                  | 01 §9.2            | Criterios Enterprise               |
| <b>Enterprise (intensity)</b>          | Intensity with all <i>gates</i> held separately, full templates, verification by the AI Auditor at all <i>gates</i> , decision by the AI Committee (the board in Transform), multi-level sign-off with veto and quarterly R6. It applies if at least one Enterprise criterion is met. | 01 §9              | Enterprise (intensidad)            |
| <b>Enterprise investment threshold</b> | Total three-year cost of an initiative (build plus expected recurring cost for the first three years) above which the initiative is Enterprise. It is approved by the board in C2. Splitting an initiative to stay below it is a major nonconformity.                                 | 01 §9.2; 13 §6     | Umbral de inversión Enterprise     |
| <b>Estimated</b>                       | Status of the amount assigned by the AI Committee, the board or an assessment team when the area provides no data or to contrast a declared figure. It does not substantiate any realised value criterion. Indicative expiry of 6 months.                                             | 01 §11; 40 §4.1    | Estimado                           |
| <b>EU AI Act</b>                       | Regulation (EU) 2024/1689, as amended. Its mapping to phases, roles and evidence, and the status of its application dates, are set out in document 34.                                                                                                                                | 34 §3              | Reglamento Europeo de IA           |
| <b>European AI Office</b>              | Body of the European Commission provided for in Regulation (EU) 2024/1689.                                                                                                                                                                                                            | 30 §1.2; 34 §1.3   | Oficina Europea de IA              |
| <b>Evidence</b>                        | Verifiable document, record or result that demonstrates that a criterion is met. It has an author, date, version and verification, and must exist before the <i>gate</i> .                                                                                                            | 01 §4, §7.4        | Evidencia; evidencias obligatorias |
| <b>Exit criterion</b>                  | Condition that must be met at the end of a phase in order to request its <i>gate</i> .                                                                                                                                                                                                | 01 §6.2–6.9        | Criterio de salida                 |
| <b>Extreme impact rule</b>             | A risk with impact 5 on the people and rights axis or on the regulatory axis is treated, for acceptance purposes, as at least High, even if its likelihood is 1.                                                                                                                      | 33 §4.3            | Regla de impacto extremo           |

## 3.6 F

| Term                                        | Definition in SEVEN-G                                                                                                                                                                                           | Reference document | Spanish term                                    |
|---------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|-------------------------------------------------|
| <b>Falsifiable value hypothesis</b>         | Statement of the expected value with main metric, measured baseline, target, success threshold, attribution method, monetary value with formula and stop criteria. A hypothesis that cannot fail is not valid.  | 01 §6.4; P08       | Hipótesis de valor falsable                     |
| <b>Finding</b>                              | Result of a verification or audit classified as an observation or as a minor, major or critical nonconformity.                                                                                                  | 21 §10.5; 38 §8.1  | Hallazgo                                        |
| <b>Fundamental rights impact assessment</b> | Assessment that the EU AI Act requires of certain deployers of high-risk systems before putting them into use (Article 27).                                                                                     | 32 §6.2; P11       | Evaluación de impacto en derechos fundamentales |
| <b>Funding tranche</b>                      | Part of an initiative's budget released after a <i>gate</i> : tranche 1 (phases 0–3) after G0, tranche 2 (phases 4–5) after G3, tranche 3 (operation) after G5; in Transform, each approved stage is a tranche. | 14 §6.2            | Tramo de financiación                           |
| <b>Funnel</b>                               | Way of managing the portfolio as a sales process: initiatives by phase and status, times, conversion per <i>gate</i> , stalled initiatives and stop reasons.                                                    | 01 §6.11; 03 §3.5  | Embudo                                          |

## 3.7 G

| Term                        | Definition in SEVEN-G                                                                                                                                                                             | Reference document   | Spanish term                          |
|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------------|
| <b>Gate compliance rate</b> | Criteria <i>Met</i> ÷ applicable criteria × 100. It is informative: no percentage allows a gate with blocking criteria to be passed.                                                              | 21 §5.1; 03 §3.4     | Grado de cumplimiento del <i>gate</i> |
| <b>Gate criterion</b>       | Verifiable condition checked at a gate, with code G<n>. <nn> OR R6. <nn> , mandatory status (Yes, Yes ♦, Conditionable, Recommended), applicability by intensity and variation by ambition level. | 21 §2                | Criterio de <i>gate</i>               |
| <b>Gate decision</b>        | Outcome adopted by the competent body on verified evidence, with reason, conditions, decision-maker and verifier. It is documented in the <i>gate</i> decision record.                            | 01 §7.4; 21 §11; P29 | Decisión de <i>gate</i>               |
| <b>Gate outcome</b>         | Decision adopted at a gate, from a closed list that depends on the gate (section 4.1).                                                                                                            | 01 §7.3; 21 §5.3     | Resultado de <i>gate</i>              |

| Term                                             | Definition in SEVEN-G                                                                                                                                                                                  | Reference document   | Spanish term                                                              |
|--------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------|
| <b>General-purpose AI model</b>                  | Model trained with large volumes of data, capable of performing a wide range of tasks and of being integrated into other systems. It is not in itself an AI system; the systems that integrate it are. | 32 §2.2, §4.2        | Modelo de IA de uso general                                               |
| <b>Generative AI</b>                             | Systems that generate content (text, image, audio, code) from instructions and context. It is a value of the technology tag and triggers the [GEN] criteria.                                           | 03 §3.3; 21 §2.3; 35 | IA generativa                                                             |
| <b>Governance and compliance enablement band</b> | Separate presentation, in the heat map, of the investment in initiatives whose primary sphere is 08 or 09. It is excluded from signals 1, 2 and 7 of the transformation index.                         | 10 §4.2; 12 §4.2     | Banda de habilitación de gobierno y cumplimiento                          |
| <b>Grades of spheres 08 and 09</b>               | Specific scale used to assess the dimensions of spheres 08 and 09: Absent, Basic, Systematic, Advanced (section 4.10). They are neither maturity levels nor ambition levels.                           | 10 §4.2              | Grados de las esferas 08 y 09 (Ausente · Básico · Sistemático · Avanzado) |

### 3.8 H

| Term                                     | Definition in SEVEN-G                                                                                                                                                                                                                                                                                                       | Reference document          | Spanish term                          |
|------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|---------------------------------------|
| <b>High-risk AI system</b>               | System classified as high-risk under the EU AI Act: safety component or product under Annex I, or an Annex III area without the Article 6(3) exception. It is an Enterprise criterion. The application dates of its obligations are dealt with in document 34.                                                              | 01 §9.2; 32 §3.4 and §5; 34 | Alto riesgo (sistema de IA de)        |
| <b>Horizon (H) and discount rate (r)</b> | Number of years of economic evaluation and annual discount rate set by the company in C2. If no rate is set, $r = 0$ .                                                                                                                                                                                                      | 40 §8.2                     | Horizonte (H) y tasa de descuento (r) |
| <b>Human oversight</b>                   | Design and exercise of what the system decides, what a person validates and what is never delegated, by people with the competence, training and real authority to disagree, correct or interrupt. An overseer without real authority, or assessed on how quickly they accept proposals, does not exercise human oversight. | 01 §6.6; 50 §4.2; P17       | Supervisión humana                    |
| <b>Human validation</b>                  | Informed approval by a person of an action proposed by a system before it is executed, with information on what is proposed, with what data, why and with what effects, and with the possibility of rejecting it at no cost to that person.                                                                                 | 35 §4.6                     | Validación humana                     |

### 3.9 I–K

| Term                           | Definition in SEVEN-G                                                                                                                                                                                                                                                                         | Reference document | Spanish term                      |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|-----------------------------------|
| <b>Impact map · sphere map</b> | Component A of the framework: nine spheres of impact and three ambition levels to decide where and with what ambition to use AI without talking about technology.                                                                                                                             | 00 §4.1; 10        | Mapa de impacto · mapa de esferas |
| <b>Implementation scope</b>    | The company's decision, Lite or Enterprise, on how it organises its bodies and its verification to apply SEVEN-G. It does not replace the intensity of each initiative: in a company with Lite scope, any initiative that meets an Enterprise criterion is managed with Enterprise intensity. | 90 §2              | Alcance de implantación           |
| <b>Index signals</b>           | Eight observable signals of the transformation index (codes IT-S1 to IT-S8): 1 investment mix, 2 value mix, 3 materialisation, 4 depth of change, 5 operating model, 6 AI-enabled revenue, 7 progression to production, 8 board decision. Each scores from 0 to 3.                            | 00 §5.3; 12 §4.4   | Señales del índice                |
| <b>Inherent risk</b>           | Level of risk without considering the initiative's specific controls.                                                                                                                                                                                                                         | 33 §5.1            | Riesgo inherente                  |
| <b>Initial investment (I)</b>  | Build cost plus initial adoption cost, incurred once. It does not include recurring cost.                                                                                                                                                                                                     | 40 §8.2; 42        | Inversión inicial (I)             |
| <b>Initiative</b>              | Body of work that pursues a value hypothesis through one or more AI systems. It is the unit that goes through the lifecycle and is identified with the code IA-AAAA-NNN.                                                                                                                      | 01 §4; 03 §3.3     | Iniciativa                        |
| <b>Initiative charter</b>      | Phase 0 evidence that identifies the initiative, its objective, its sponsor and its fit with the AI thesis.                                                                                                                                                                                   | 01 §6.2; P01       | Carta de la iniciativa            |
| <b>Initiative lifecycle</b>    | Initiative level of the framework: phases 0 to 7, each closed by a decision gate (R6 in phase 6).                                                                                                                                                                                             | 01 §6              | Ciclo de vida de la iniciativa    |
| <b>Initiative register</b>     | Central tool (T01) that manages the portfolio as a funnel: phase and status, dated events, criteria for each <i>gate</i> , conditions, controlled taxonomy tags, value and stop reasons.                                                                                                      | 01 §6.11; 03 §3    | Registro de iniciativas           |
| <b>Intensity</b>               | Level of rigour with which the lifecycle is applied to an initiative: Lite or Enterprise. It is determined in phase 0 and reviewed at G3 and at each R6.                                                                                                                                      | 01 §4, §9          | Intensidad                        |
| <b>Intensity determination</b> | Phase 0 evidence, reviewed at G3 and at each R6, that records whether any Enterprise criterion is met and the resulting intensity.                                                                                                                                                            | 01 §9.1; P04; T04  | Determinación de intensidad       |

| Term                               | Definition in SEVEN-G                                                                                                                                                                                                                                                                                               | Reference document    | Spanish term          |
|------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|-----------------------|
| <b>Intent-based access control</b> | Mechanism that ensures that every action of an agent is traceable to an authorised intent: a mandate with objective, tools, data and limits; a decision point external to the model that checks each action; an ephemeral permission limited to that action; and a record of the action with the intent identifier. | 35 §4.4               | Control de intención  |
| <b>Inventory registration</b>      | Phase 0 evidence: registration of the system in the AI system inventory (T02) with its code SIA-AAAA-NNN and the minimum fields for its usage type.                                                                                                                                                                 | 01 §6.2; 32 §7.1; P05 | Alta en el inventario |
| <b>Iterate</b>                     | <i>Gate</i> outcome: results are insufficient but the hypothesis remains plausible; the phase activities are repeated and the initiative returns to the same <i>gate</i> . After two iterations, the higher body decides. At G7, keeping the initiative unchanged is recorded as Iterate with a return to phase 6.  | 01 §7.3–7.4; 21 §5.3  | Iterar                |
| <b>Kill switch</b>                 | Mechanism to stop an entire agent or a specific capability immediately without deploying code. When activated, it revokes credentials, blocks new actions, preserves logs and activates the fallback process. It is tested before G5 and periodically.                                                              | 35 §4.7               | Interruptor de parada |

### 3.10 L

| Term                       | Definition in SEVEN-G                                                                                                                                                                                                                                                                                                   | Reference document            | Spanish term                                                                                                                                                                                                                                 |
|----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Learning milestones</b> | Verifiable intermediate results that a Transform bet must achieve at each stage in order to release the next.                                                                                                                                                                                                           | 01 §6.4, §7.6; 13 §7; 14 §6.2 | Hitos de aprendizaje                                                                                                                                                                                                                         |
| <b>Least privilege</b>     | Principle whereby an agent only has a closed list of the tools, operations and data it needs, with read and write access authorised separately.                                                                                                                                                                         | 35 §4.2                       | Mínimo privilegio                                                                                                                                                                                                                            |
| <b>Lifecycle phases</b>    | 0 Context and constraints · 1 Opportunity discovery · 2 Value hypothesis · 3 Feasibility and risk · 4 Solution design · 5 Delivery and validation · 6 Operation and governance · 7 Evolution or retirement. Phase 0 is enabling: without an approved G0 the initiative cannot consume budget or access production data. | 01 §6.1; 20                   | Fases del ciclo de vida (0 Contexto y restricciones · 1 Descubrimiento de oportunidades · 2 Hipótesis de valor · 3 Viabilidad y riesgo · 4 Diseño de la solución · 5 Entrega y validación · 6 Operación y gobierno · 7 Evolución o retirada) |

| Term                    | Definition in SEVEN-G                                                                                                                                                                                                                        | Reference document | Spanish term      |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|-------------------|
| <b>Lite (intensity)</b> | Intensity for initiatives that do not meet any Enterprise criterion: G0–G2 and G4–G5 may be grouped, simplified templates, verification by the AI Office, decision by the sponsor (with risk clearance at G3, G4 and G5) and half-yearly R6. | 01 §7.5, §9.3      | Lite (intensidad) |

### 3.11 M

| Term                                                     | Definition in SEVEN-G                                                                                                                                                                                                                                                                                                                                                                                                                                          | Reference document | Spanish term                                                      |
|----------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|-------------------------------------------------------------------|
| <b>Main stop gate</b>                                    | G3 · Feasibility, the gate at which the decision to stop before investing in the build is concentrated.                                                                                                                                                                                                                                                                                                                                                        | 01 §6.5            | Principal puerta de parada                                        |
| <b>Major ICT-related incident · significant incident</b> | Incidents that meet, respectively, the classification criteria of <a href="#">DORA</a> or of Article 23(3) of <a href="#">NIS2</a> as transposed. Where they apply, they are S1.                                                                                                                                                                                                                                                                               | 37 §1.1            | Incidente grave relacionado con las TIC · incidente significativo |
| <b>Materialised capacity</b>                             | Part of released capacity that is converted into a verifiable lower actual cost or into a budgeted avoided cost. It is the only part that counts as efficiency.                                                                                                                                                                                                                                                                                                | 23 §7.1; 40 F5     | Capacidad materializada                                           |
| <b>Materiality threshold</b>                             | Amount (M) set by the company in C2 in proportion to its size, above which an initiative is reported individually to the board, and which serves as a reference for the economic axis of risk impact.                                                                                                                                                                                                                                                          | 13 §6; 33 §4.2     | Materialidad (umbral de)                                          |
| <b>Maturity</b>                                          | Degree to which the company has AI practices that are defined, applied, measured and improved, assessed with evidence across seven dimensions (D1–D7) and six levels (0–5).                                                                                                                                                                                                                                                                                    | 00 §4.5; 11        | Madurez                                                           |
| <b>Maturity dimension</b>                                | Each of the seven areas (D1–D7) in which the company's maturity is assessed with cumulative criteria and observable evidence.                                                                                                                                                                                                                                                                                                                                  | 11 §2.1            | Dimensión de madurez                                              |
| <b>Minor · significant · substantial change</b>          | Classes of change to a system in production. <b>Minor</b> : does not alter behaviour or controls. <b>Significant</b> : alters behaviour within the approved purpose, scope, autonomy and risks, and requires regression evaluation, updating of the documentation and a report at the next R6. <b>Substantial</b> : alters the approved purpose, scope, autonomy, data, critical controls or risk profile, and requires a return to the relevant <i>gate</i> . | 52 §6              | Cambio menor · significativo · sustancial                         |

| Term                                | Definition in SEVEN-G                                                                                                                                                                                                                                             | Reference document  | Spanish term                             |
|-------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|------------------------------------------|
| <b>Multi-level go-live sign-off</b> | Enterprise G5 requirement: recorded sign-off, with veto power, by the technical owner, risk and compliance, information security and data protection. A standing veto prevents proceeding and can only be lifted by whoever issued it or their formal substitute. | 01 §6.7; 21 §9; P23 | Firma multinivel de puesta en producción |

### 3.12 N

| Term                           | Definition in SEVEN-G                                                                                                                                                                                                                                                                                                                                                                        | Reference document | Spanish term            |
|--------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|-------------------------|
| <b>Near miss</b>               | Event that could have caused harm and did not, thanks to a control or by chance. It is recorded as an S4 incident.                                                                                                                                                                                                                                                                           | 37 §1.1            | Cuasi incidente         |
| <b>Net present value (NPV)</b> | NPV = $-I + \sum \text{annual net value in year } t \div (1 + r)^t$ , for $t = 1 \dots H$ (F7).<br><b>Single economic feasibility criterion:</b> NPV $\geq 0$ with the horizon and rate approved in C2, calculated on net benefit. In Transform it is not required at G3 and is calculated for information only.                                                                             | 01 §7.6; 40 §8.3   | Valor actual neto (VAN) |
| <b>NIST CSF</b>                | NIST Cybersecurity Framework, version 2.0 (NIST CSWP 29, February 2024): voluntary taxonomy of cybersecurity outcomes with six functions (GV govern, ID identify, PR protect, DE detect, RS respond and RC recover), 22 categories and 106 subcategories, organisational profiles and <i>tiers</i> . SEVEN-G maps it in 34 §5.3 and in the "CSF function" column of the SEG and AG controls. | 34 §5.3; 35 §6–§7  | NIST CSF                |
| <b>No data</b>                 | Absent value. It is not zero, it is shown as absent and it is never replaced by an undeclared estimate.                                                                                                                                                                                                                                                                                      | 00 rule 8; 40 §3.8 | Sin dato                |
| <b>Non-AI alternatives</b>     | Phase 1 evidence that documents the non-AI solutions considered for the same problem and why AI provides something they do not.                                                                                                                                                                                                                                                              | 01 §6.3; P06       | Alternativas sin IA     |
| <b>Nonconformity</b>           | Failure to meet a mandatory requirement of the framework ("must"), classified as minor, major or critical, and managed with containment, root cause, corrective action, effectiveness verification, closure and re-audit.                                                                                                                                                                    | 01 §12; 37 §3      | No conformidad          |

### 3.13 O

| Term                              | Definition in SEVEN-G                                                                                                                                                                                                             | Reference document | Spanish term               |
|-----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|----------------------------|
| <b>Observation</b>                | Finding that is not a breach: an opportunity for improvement or a risk of future noncompliance. Management decides whether to act.                                                                                                | 21 §10.5; 38 §8.1  | Observación                |
| <b>Offensive AI (exposure to)</b> | Use of AI by third parties to attack the company: synthetic impersonation, attack automation and accelerated exploitation of vulnerabilities.                                                                                     | 01 §10; 35 §9      | IA ofensiva (exposición a) |
| <b>Official formulas</b>          | Formulas F1 to F10 (and F2v) in document 40, the only valid ones for amounts, net value, additional net value per euro, released capacity, materialisation, validated proportion, NPV, ROI, payback period and value realisation. | 40 §6              | Fórmulas oficiales         |
| <b>Optimise</b>                   | Ambition level that does the same thing faster, more cheaply or with fewer errors, without changing what is done or who does it. Value lies mainly in efficiencies.                                                               | 00 §4.1; 10 §3     | Optimizar                  |
| <b>Option value</b>               | Value of a Transform bet that depends on future decisions. It is documented qualitatively at G3 with learning milestones and an investment cap per stage, and never adds to net value.                                            | 01 §7.6; 40 §5.3   | Valor de opción            |
| <b>Overall maturity level</b>     | Weighted average of the levels of the seven dimensions, rounded down and capped at the lowest level of D1 or D6 plus one.                                                                                                         | 11 §2.3, §5.3      | Nivel global de madurez    |

### 3.14 P

| Term                        | Definition in SEVEN-G                                                                                                                                                                                                                                                                                                                                         | Reference document | Spanish term                |
|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|-----------------------------|
| <b>Payback period · ROI</b> | <b>Informative</b> economic indicators, without thresholds of their own: the year in which cumulative annual net value equals the initial investment (F9), and return on the initial investment, always calculated on annual net value (F8). They are not a G3 threshold: the payback periods by ambition level in document 13 §7 are informative references. | 40 §6, §8.3; 13 §7 | Plazo de recuperación · ROI |
| <b>Pivot</b>                | Outcome of G1, G2 or G3: the hypothesis does not hold, but there is a reasonable alternative; the initiative returns to phase 2 with a new hypothesis, keeping the approved context.                                                                                                                                                                          | 01 §7.3            | Pivotar                     |
| <b>Portfolio</b>            | Set of authorised initiatives, with their budget, priority and ambition balance. It is managed as a funnel.                                                                                                                                                                                                                                                   | 01 §4; 14          | Cartera                     |

| Term                                     | Definition in SEVEN-G                                                                                                                                                                                                                                                                                                                                                                                                                        | Reference document         | Spanish term                               |
|------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------|--------------------------------------------|
| <b>Portfolio risk</b>                    | Risk arising from the aggregation of initiatives: concentration, correlation and dependence on suppliers. It is reviewed by the AI Committee.                                                                                                                                                                                                                                                                                                | 01 §3 principle 5; 33 §10  | Riesgo de cartera                          |
| <b>Post-market monitoring</b>            | Documented system with which the provider of a high-risk system collects and analyses data on its performance throughout its lifetime (EU AI Act, Article 72). The deployer monitors operation in accordance with the instructions for use and informs the provider (Article 26(5)). It is the single term used in the library; "post-production monitoring" and "post-commercialisation monitoring" are not used.                           | 52 §9; 34 §3.14            | Vigilancia posterior a la comercialización |
| <b>Potential value</b>                   | Value that has not yet occurred. It is only a data point if it is accompanied by its additional investment, its hypothesis and its time frame; it is used for prioritisation and never adds to realised net value.                                                                                                                                                                                                                           | 00 rule 4; 40 §5.3         | Valor potencial                            |
| <b>Primary sphere · secondary sphere</b> | The <b>primary</b> sphere is mandatory and is the one in which the main metric of the value hypothesis is measured; it receives all the investment and value. The <b>secondary</b> sphere is optional, at most one, only if there is a second measurable effect with an indicator of that sphere, and it carries no amounts. Spheres 08 and 09 are only primary or secondary when the purpose of the initiative is compliance or governance. | 10 §4.1–4.2                | Esfera principal · esfera secundaria       |
| <b>Proceed</b>                           | <i>Gate</i> outcome: all criteria are met and all evidence is verified; the initiative moves to the next phase.                                                                                                                                                                                                                                                                                                                              | 01 §7.3                    | Continuar                                  |
| <b>Proceed with conditions</b>           | <i>Gate</i> or R6 outcome: the essential criteria are met and non-critical aspects remain pending, with explicit conditions, time limit and owner. It is not accepted for critical security, legal compliance or human oversight controls.                                                                                                                                                                                                   | 01 §7.3                    | Continuar con condiciones                  |
| <b>Proceed with operation</b>            | R6 outcome: the initiative continues to deliver value under control and remains in production until the next review.                                                                                                                                                                                                                                                                                                                         | 01 §7.3; 21 §5.3           | Continuar la operación                     |
| <b>Programme</b>                         | Grouping of related initiatives by means of the free tag "Programme", whose status is summarised in a traffic light.                                                                                                                                                                                                                                                                                                                         | 14 §12                     | Programa                                   |
| <b>Programme traffic light</b>           | Summary of a programme's status using the worst colour across six axes (time, cost, value, risk, governance, adoption). An axis with no data is shown in grey and the programme cannot be green.                                                                                                                                                                                                                                             | 14 §12                     | Semáforo de programas                      |
| <b>Prohibited practice</b>               | Use of AI prohibited by Article 5 of the EU AI Act. It is not assessed as a risk or accepted: it is avoided, and at G3 it requires Stop.                                                                                                                                                                                                                                                                                                     | 01 §6.5; 33 §4.3; 21 G3.08 | Práctica prohibida                         |

| Term                                           | Definition in SEVEN-G                                                                                                                                                                                                                                                                                                                                                                                                              | Reference document | Spanish term                          |
|------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|---------------------------------------|
| <b>Prompt injection</b>                        | Attack that introduces instructions to alter the intended behaviour of a generative AI system or an agent. It is <b>direct</b> when the user introduces it and <b>indirect</b> when it is hidden in content the system reads (documents, emails, websites, tool responses). Its controls must be checked with adversarial testing.                                                                                                 | 35 §3.1; 33 §5.3   | Inyección de instrucciones            |
| <b>Proposed, confirmed and actual ambition</b> | Three moments in the ambition classification of an initiative: <b>proposed</b> in phase 1, <b>confirmed</b> at G2 on the basis of the value hypothesis and <b>actual</b> at G7 (and, where appropriate, at R6) according to the evidence in production.                                                                                                                                                                            | 12 §3.4; 03 §3.3   | Ambición propuesta, confirmada y real |
| <b>Provider (regulatory role)</b>              | Under the EU AI Act, a person or entity that develops an AI system or a general-purpose AI model, or has one developed, and places it on the market or puts it into service under its own name or trademark (Article 3(3)). A deployer becomes a provider if it puts its name or trademark on the system, makes a substantial modification or changes its purpose in such a way that the system becomes high-risk (Article 25(1)). | 32 §4              | Proveedor (rol regulatorio)           |

### 3.15 R

| Term                          | Definition in SEVEN-G                                                                                                                                                                                                                                                                                                                                              | Reference document            | Spanish term                 |
|-------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------|------------------------------|
| <b>R6 · Continuity review</b> | Periodic review that replaces the <i>gate</i> in phase 6: at least quarterly in Enterprise and half-yearly in Lite. It checks realised value against the hypothesis, stability, incidents, compliance and the validity of the classification. Outcomes: Proceed with operation, Proceed with conditions or Bring G7 forward. Omitting it is a major nonconformity. | 01 §6.8; §7.3; 21 §6.7; 52 §8 | R6 · Revisión de continuidad |
| <b>Reassigned capacity</b>    | Part of released capacity explicitly assigned to identified activities, with owner, hours, date and outcome indicator. It only adds up as efficiency if it avoids a budgeted cost; if it is allocated to a new activity, its value is measured through the outcome of that activity and is not counted twice.                                                      | 23 §7.1; 40 §5.3; 50 §6       | Capacidad reasignada         |
| <b>Re-audit</b>               | Full or partial repetition of an audit after a Nonconformant outcome or to verify the closure of critical and major nonconformities.                                                                                                                                                                                                                               | 37 §3.9; 38 §10               | Reauditoría                  |
| <b>Recurring cost</b>         | Full annual cost of operating a use case, direct and allocated shared cost, across the nine cost categories. It is always deducted in full, regardless of its status.                                                                                                                                                                                              | 00 rule 6; 40 §5.1; 42 §4     | Coste recurrente             |

| Term                             | Definition in SEVEN-G                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Reference document                          | Spanish term                                           |
|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------|--------------------------------------------------------|
| <b>Red lines</b>                 | Uses of AI that the company does not develop, procure, deploy or use under any circumstances, defined in its corporate policy. They admit no exceptions.                                                                                                                                                                                                                                                                                                                                                                  | 31 §3.7                                     | Líneas rojas                                           |
| <b>Reference time limit</b>      | Indicative duration of each phase and of a <i>gate</i> decision, approved in C2; exceeding it marks the initiative as stalled.                                                                                                                                                                                                                                                                                                                                                                                            | 01 §6.11; 03 §3.6                           | Plazo de referencia                                    |
| <b>Regularisation</b>            | Process whereby initiatives in production that predate the adoption of the framework, or unauthorised uses detected, are brought into the framework through a review equivalent to G7 or through their authorisation, replacement or blocking.                                                                                                                                                                                                                                                                            | 01 §1.2, §14; 14 §11; 31 §5.5               | Regularización                                         |
| <b>Regulatory classification</b> | Determination, with qualified legal judgement, of the system's category under the applicable regulation (Prohibited, High risk, Transparency obligations, Minimal risk, Out of scope, Pending classification) and of the company's role. It is provisional in phase 0 and final in phase 3.                                                                                                                                                                                                                               | 01 §6.5; 32 §3.4 and §5; P11                | Clasificación regulatoria                              |
| <b>Released capacity</b>         | Working hours that are no longer needed to handle the same volume with the same quality, net of the new work introduced by AI (formula F4). It <b>does not add up as savings</b> until it is materialised; it is reported separately. Released capacity = materialised + reassigned + unapplied. Its five destinations (PER-D1 Materialise, PER-D2 Reassign, PER-D3 Absorb growth, PER-D4 Reinvest in quality, service or compliance, PER-D5 No decision) are grouped into those three parts in accordance with 23 §10.5. | 00 rule 3; 23 §7.1, §10.5; 40 §5.3; 50 §6.2 | Capacidad liberada                                     |
| <b>Residual risk</b>             | Level of risk with controls. <b>Target:</b> expected after applying the planned controls (G3 and G4). <b>Verified:</b> after checking the effectiveness of the controls with evidence (G5 and R6).                                                                                                                                                                                                                                                                                                                        | 33 §5.1                                     | Riesgo residual; riesgo residual objetivo · verificado |
| <b>Retire</b>                    | G7 outcome: value is not sustained, risk has increased or there is a better alternative. Retirement is planned and recorded with date, reason, body, replacement, treatment of data and models, and communication to those affected.                                                                                                                                                                                                                                                                                      | 01 §6.9, §7.3; 14 §10                       | Retirar                                                |
| <b>Return</b>                    | Additive value type: additional revenue or margin attributable to the initiative (new sales, cross-selling, retention, price, new services), preferably valued as margin.                                                                                                                                                                                                                                                                                                                                                 | 00 rule 6; 40 §5.1                          | Retorno                                                |
| <b>Risk acceptance</b>           | Recorded decision, with validity period and conditions, whereby the competent level assumes a residual risk within the risk appetite. Low: product owner · Medium: sponsor with risk clearance from the risk owner · High: AI Committee · Critical: not accepted; exceptionally, only the board or its board committee. It lapses if the level, system, supplier, model, regulatory classification or autonomy changes.                                                                                                   | 33 §7.1; 13 §5.2                            | Aceptación del riesgo                                  |

| Term                          | Definition in SEVEN-G                                                                                                                                                                                                                                                                                              | Reference document                       | Spanish term                    |
|-------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------|---------------------------------|
| <b>Risk appetite</b>          | Amount and type of risk the company is willing to take on to achieve its objectives with AI. It is declared by risk category with a grade (Averse, Cautious, Moderate, Open), tolerance metrics and limits, and is approved by the board in C2. The grade may tighten the general acceptance rule, never relax it. | 13 §5                                    | Apetito de riesgo               |
| <b>Risk appetite grade</b>    | The company's position towards risk in each category: Averse, Cautious, Moderate or Open (section 4.8).                                                                                                                                                                                                            | 13 §5.2                                  | Grado de apetito                |
| <b>Risk clearance</b>         | Pronouncement by the AI Risk Owner that enables the sponsor's decision at G3, G4 and G5 in Lite intensity and the acceptance of Medium residual risks. Whoever issues it cannot be part of the building team or verify the evidence for the same <i>gate</i> .                                                     | 01 §7.5, §8.1                            | Conformidad de riesgos          |
| <b>Risk level</b>             | Product of likelihood and impact in the 5 × 5 matrix: Low, Medium, High or Critical.                                                                                                                                                                                                                               | 33 §4.3                                  | Nivel de riesgo                 |
| <b>Role assignment record</b> | Phase 0 evidence that assigns the initiative's six roles and checks their incompatibilities.                                                                                                                                                                                                                       | 01 §6.2, §8.2; P03                       | Registro de asignación de roles |
| <b>Rollback plan</b>          | Plan to return to a previous safe situation (previous version, non-AI alternative, reduced autonomy or scope) if the solution fails. It must be tested before go-live.                                                                                                                                             | 01 §3 principle 4, §6.6–6.7; P19; 52 §10 | Plan de reversión               |

### 3.16 S

| Term                            | Definition in SEVEN-G                                                                                                                                                                                                                                                                          | Reference document            | Spanish term                  |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------|-------------------------------|
| <b>Scale</b>                    | G7 outcome: value demonstrated and risk controlled. It opens a new phase 0 for the extended scope. In Transform it requires board approval.                                                                                                                                                    | 01 §7.3                       | Escalar                       |
| <b>Second line · third line</b> | <b>Second line:</b> risk, compliance, information security and data protection; it provides the risk owners, issues risk clearances and signs the Enterprise go-live. <b>Third line:</b> internal audit or external auditor; it provides or oversees the AI Auditors and audits the framework. | 01 §8.3; 30 §9                | Segunda línea · tercera línea |
| <b>Segregation of duties</b>    | Principle whereby whoever builds does not control and nobody approves their own work: whoever provides evidence neither verifies it nor decides, and incompatible roles are not held by the same person.                                                                                       | 01 §3 principle 7, §7.4, §8.2 | Separación de funciones       |

| Term                             | Definition in SEVEN-G                                                                                                                                                                                                                                                                                                                                                                                        | Reference document | Spanish term                       |
|----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|------------------------------------|
| <b>Sensitive action</b>          | Action by an agent that requires informed human validation before it is executed: payments or changes to bank details, external communications on behalf of the company, decisions with significant effects on people, creation, removal or modification of personal data or permissions, changes to production systems, deletions or irreversible actions, and any action outside ordinary limits.          | 35 §4.6            | Acción sensible                    |
| <b>Serious incident (AI Act)</b> | Incident or malfunctioning of an AI system that directly or indirectly leads to the death of a person or serious harm to a person's health, a serious and irreversible disruption of critical infrastructure, the infringement of obligations under Union law intended to protect fundamental rights, or serious harm to property or the environment (Article 3(49)). Every possible serious incident is S1. | 37 §1.1; 34        | Incidente grave (Reglamento de IA) |
| <b>Severity (of an incident)</b> | Seriousness of an AI incident on four levels, S1 Critical to S4 Low, assigned at triage using the most serious criterion met. It is independent of the nonconformity scale.                                                                                                                                                                                                                                  | 37 §4.2            | Severidad (de incidente)           |
| <b>Sphere</b>                    | Domain of AI impact in the organisation. There are nine, grouped into where value is created (01–04), enablers (05–07), boundaries (08) and meta-sphere (09).                                                                                                                                                                                                                                                | 01 §4; 10 §2       | Esfera                             |
| <b>Sphere × level heat map</b>   | Portfolio view with investment, recurring cost and value by primary sphere and ambition level; rows 08 and 09 show grades by dimension.                                                                                                                                                                                                                                                                      | 10 §8; T16         | Mapa de calor esferas × niveles    |
| <b>Stalled (initiative)</b>      | Initiative that exceeds the reference time limit for its phase approved in C2. It is flagged and reviewed by the AI Committee.                                                                                                                                                                                                                                                                               | 01 §6.11; 03 §3.6  | Estancada (iniciativa)             |
| <b>Stop</b>                      | <i>Gate</i> outcome: there is no plausible value, feasibility is not demonstrated or the risk is unacceptable. The initiative is closed with a coded reason and lessons learned. A well-founded stop is a valid outcome.                                                                                                                                                                                     | 01 §7.3            | Parar                              |
| <b>Stop criteria</b>             | Conditions set in phase 2, before investing, whose fulfilment requires Stop to be proposed. They cannot be relaxed during the phase without the approval of the body that authorised the initiative.                                                                                                                                                                                                         | 01 §6.4, §7.4      | Criterios de parada                |
| <b>Stop or retirement reason</b> | Coded reason, from a closed list, recorded for every stop or retirement.                                                                                                                                                                                                                                                                                                                                     | 01 §6.11; 03 §3.3  | Motivo de parada o retirada        |

### 3.17 T

| Term                                        | Definition in SEVEN-G                                                                                                                                                                                                                                                                                                                                                                                                                                     | Reference document      | Spanish term                         |
|---------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|--------------------------------------|
| <b>Template</b>                             | Standard Block H document: P01–P31 for preparing the initiative's mandatory evidence and P32–P71 for the registers, reports and decisions of the company, the board, compliance, third parties, audit and framework implementation. Each has an editable Word version.                                                                                                                                                                                    | 01 §6.10; 03 §5         | Plantilla                            |
| <b>Third-party AI embedded in processes</b> | Supplier software with AI features that take part in decisions, operations or customer relations. It goes through the full lifecycle, with the design and delivery phases focused on the selection, integration, contract and controls of the supplier.                                                                                                                                                                                                   | 01 §1.2; 32 §2.1        | IA de terceros integrada en procesos |
| <b>Third-party requirement level</b>        | Degree of due diligence, contract, monitoring and exit required for each relationship between a supplier and a service: N1 Standard, N2 Enhanced or N3 Critical, determined by the highest factor among criticality, data, autonomy and substitutability.                                                                                                                                                                                                 | 36 §4                   | Nivel de exigencia a terceros        |
| <b>Tier (CSF)</b>                           | NIST CSF degree that characterises the rigour of the cybersecurity risk governance and management practices of the whole organisation or of a unit: 1 Partial, 2 Risk Informed, 3 Repeatable and 4 Adaptive. It is not a maturity level for each subcategory and does not exist in the NIST AI RMF. Not translated.                                                                                                                                       | 34 §5.3                 | tier (CSF)                           |
| <b>Time in phase · decision time</b>        | <b>Time in phase:</b> days between entry into and exit from the phase, excluding time on hold. <b>Decision time:</b> days between the <i>gate</i> request and the decision.                                                                                                                                                                                                                                                                               | 03 §3.5; 41             | Tiempo en fase · tiempo de decisión  |
| <b>Transform</b>                            | Ambition level that changes what is offered, how the company competes or how it is organised. Value lies mainly in return and in changes to the operating model. It is always Enterprise and requires board approval at G2 and when scaling at G7.                                                                                                                                                                                                        | 00 §4.1; 01 §7.5; 10 §3 | Transformar                          |
| <b>Transformation declaration</b>           | Situation in which the company claims to be transforming itself with AI: its thesis sets Transform as the target ambition in some sphere, initiatives confirmed as Transform account for 10% or more of portfolio cost, or its communications present AI as business transformation (conditions IT-D1 to IT-D3). If it exists and the evidenced profile is not Transformation under way, the profile assigned is Declared but unevidenced transformation. | 12 §5.1–5.2             | Declaración de transformación        |

| Term                          | Definition in SEVEN-G                                                                                                                                                                                                                                                          | Reference document | Spanish term                                              |
|-------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|-----------------------------------------------------------|
| <b>Transformation index</b>   | Instrument that places the company in one of five profiles between efficiency and transformation, with eight signals scored from 0 to 3, three baseline conditions and a cross-check against the transformation declaration. The profile is not assigned by the sum of points. | 00 §5.3; 12 §4–5   | Índice de transformación                                  |
| <b>Transformation profile</b> | One of the five profiles of the transformation index (section 4.16). The <b>evidenced profile</b> results from the signals and baseline conditions; if there is an unevidenced transformation declaration, it is reported as the <b>underlying profile</b> .                   | 00 §5.3; 12 §5     | Perfil de transformación; perfil evidenciado · subyacente |
| <b>Typical risk</b>           | Reference risk in the catalogue, coded RT-<CAT>-NN, which serves as a starting point for identifying the specific risks of each initiative.                                                                                                                                    | 33 §9              | Riesgo tipo                                               |

| Term                                       | Definition in SEVEN-G                                                                                                                                                                                                                                                                   | Reference document      | Spanish term                           |
|--------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|----------------------------------------|
| <b>Unauthorised use (<i>shadow AI</i>)</b> | Use of AI tools without approval, with personal accounts, extensions or features activated without permission. It is detected, recorded and regularised (authorisation, replacement or blocking) as a nonconformity; it is at least major if it involves personal or confidential data. | 01 §1.2; 31 §5; 37 §3.3 | Uso no autorizado ( <i>shadow AI</i> ) |
| <b>Use case</b>                            | Specific application of an AI system to a process or decision. An initiative may include several use cases.                                                                                                                                                                             | 01 §4; P31              | Caso de uso                            |

| Term                  | Definition in SEVEN-G                                                                                                                                                                                                                                                   | Reference document | Spanish term     |
|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|------------------|
| <b>Valid evidence</b> | Evidence that passes the fourteen rules EV.01 to EV.14 (identification, author, date, version, precedence, integrity, relevance, real data, approval and segregation, completeness, consistency, information protection, evidence from systems and from third parties). | 21 §4; 22 §11      | Evidencia válida |

| Term                                              | Definition in SEVEN-G                                                                                                                                                                                                                                                                                                               | Reference document | Spanish term                                     |
|---------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|--------------------------------------------------|
| <b>Validated</b>                                  | Status of the amount assigned by management control or audit, never by the benefiting area or the team, on value realised in a closed period with formula, baseline, attribution method and traceable data. Indicative expiry of 12 months. It is the only status that substantiates materialised savings or measured return at G7. | 01 §11; 40 §4.1    | Validado                                         |
| <b>Validated proportion</b>                       | Validated value ÷ (validated + declared + estimated), over the gross realised value for the period (F6). Reports to the board always show it.                                                                                                                                                                                       | 00 rule 2; 40 F6   | Proporción validada                              |
| <b>Value hypothesis canvas</b>                    | Phase 2 template that captures the falsifiable value hypothesis, the attribution method and the stop criteria.                                                                                                                                                                                                                      | 01 §6.4; P08; T11  | Lienzo de hipótesis de valor                     |
| <b>Value measurement rules</b>                    | The ten rules in 00 §6, which apply to all use cases, phases and reports and keep their numbering throughout the library.                                                                                                                                                                                                           | 00 §6; 40 §3       | Reglas de medición del valor                     |
| <b>Value realisation</b>                          | Process and measure of the conversion of expected value into realised and validated value: realised value for the period ÷ expected value for the period according to the plan (F10).                                                                                                                                               | 40 F10; 43         | Realización del valor                            |
| <b>Verified · independent maturity assessment</b> | <b>Verified:</b> carried out by the AI Office assessment team with independent verification of a sample; it is the minimum in C1 and C5. <b>Independent:</b> carried out by the third line or by an external assessor with no involvement in the implementation. <b>Self-assessment</b> does not produce a valid level.             | 11 §4.1            | Evaluación de madurez verificada · independiente |
| <b>Verifier · decision-maker</b>                  | <b>Verifier:</b> whoever checks that the evidence for a <i>gate</i> is complete and valid (AI Office in Lite, AI Auditor in Enterprise); does not decide. <b>Decision-maker:</b> body or role that adopts the outcome; cannot have provided evidence.                                                                               | 01 §7.1, §7.5      | Verificador · decisor                            |
| <b>Veto</b>                                       | Reasoned pronouncement by a signatory of the G5 multi-level sign-off that prevents Proceed and Proceed with conditions. The AI Committee cannot lift it by majority; it can only be lifted by whoever issued it or their formal substitute in the second line.                                                                      | 21 §9.2            | Veto                                             |
| <b>Weighted portfolio value</b>                   | Sum of the expected value of the initiatives multiplied by the company's own historical probability of reaching production from their current phase. It is only shown when there is sufficient history.                                                                                                                             | 03 §3.5            | Valor ponderado de la cartera                    |

| Term  | Definition in SEVEN-G                                                                                                                                                                                    | Reference document | Spanish term |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|--------------|
| Yes ♦ | Mandatory status of a <i>gate</i> criterion that is also a critical security, legal compliance or human oversight control. It is never accepted as a condition and at Enterprise G5 it grounds the veto. | 21 §2.2            | Sí ♦         |

## 04

# Official scales

The scales in this section are closed lists. Thresholds marked as indicative are set by each company in C2 without lowering the framework's minimums.

## 4.1 *Gate* outcomes

| Outcome                        | Gates         | When it applies                                                                           | Consequence                                                                                                                                             | Spanish                   |
|--------------------------------|---------------|-------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------|
| <b>Proceed</b>                 | G0–G5         | All criteria are met and all evidence is verified.                                        | Moves to the next phase.                                                                                                                                | Continuar                 |
| <b>Proceed with conditions</b> | G0–G5 and R6  | The essential criteria are met; non-critical aspects remain.                              | Moves forward with explicit conditions, time limit and owner. Not accepted for critical controls.                                                       | Continuar con condiciones |
| <b>Iterate</b>                 | G0–G5 and G7  | Insufficient results, plausible hypothesis.                                               | The phase is repeated and the initiative returns to the same <i>gate</i> . At G7, keeping the initiative unchanged is Iterate with a return to phase 6. | Iterar                    |
| <b>Pivot</b>                   | G1, G2 and G3 | The hypothesis does not hold, but there is a reasonable alternative.                      | Return to phase 2 with a new hypothesis.                                                                                                                | Pivotar                   |
| <b>Stop</b>                    | G0–G5         | There is no plausible value, feasibility is not demonstrated or the risk is unacceptable. | Closure with a coded reason and lessons learned.                                                                                                        | Parar                     |
| <b>Scale</b>                   | G7            | Value demonstrated and risk controlled.                                                   | New phase 0 for the extended scope.                                                                                                                     | Escalar                   |
| <b>Retire</b>                  | G7            | Value is not sustained, risk has increased or there is a better alternative.              | Planned and recorded retirement.                                                                                                                        | Retirar                   |

| Outcome                       | Gates | When it applies                                          | Consequence                                    | Spanish                |
|-------------------------------|-------|----------------------------------------------------------|------------------------------------------------|------------------------|
| <b>Proceed with operation</b> | R6    | The initiative continues to deliver value under control. | Remains in production.                         | Continuar la operación |
| <b>Bring G7 forward</b>       | R6    | Relevant deviations in value, risk or compliance.        | G7 is opened without waiting for the calendar. | Adelantar G7           |

Outcomes permitted by gate:

| Gate       | Permitted outcomes                                                                                                   |
|------------|----------------------------------------------------------------------------------------------------------------------|
| G0         | Proceed · Proceed with conditions · Iterate · Stop                                                                   |
| G1, G2, G3 | Proceed · Proceed with conditions · Iterate · Pivot · Stop (G3: Stop is mandatory if there is a prohibited practice) |
| G4, G5     | Proceed · Proceed with conditions · Iterate · Stop (G5: the initiative does not proceed with a standing veto)        |
| R6         | Proceed with operation · Proceed with conditions · Bring G7 forward                                                  |
| G7         | Scale · Iterate · Retire                                                                                             |

The immediate suspension of a system is not a *gate* or R6 outcome: it is triggered at any time through the incident or nonconformity process.

## 4.2 Initiative statuses

| Status               | Meaning                                                                              | Counts towards time in phase           | Spanish           |
|----------------------|--------------------------------------------------------------------------------------|----------------------------------------|-------------------|
| <b>Registered</b>    | Idea registered, without an approved phase 0 yet.                                    | No                                     | Registrada        |
| <b>In phase</b>      | The phase activities are being carried out.                                          | Yes                                    | En fase           |
| <b>Awaiting gate</b> | Evidence submitted; awaiting verification and decision.                              | Yes, and decision time is also counted | Pendiente de gate |
| <b>On hold</b>       | Halted for a recorded external cause, with a reason and an expected resumption date. | Measured separately                    | En espera         |
| <b>In production</b> | G5 passed; in operation with continuity reviews.                                     | Time in production is measured         | En producción     |

| Status             | Meaning                                                 | Counts towards time in phase | Spanish         |
|--------------------|---------------------------------------------------------|------------------------------|-----------------|
| <b>Awaiting G7</b> | Decision on scaling, iteration or retirement under way. | Yes                          | Pendiente de G7 |
| <b>Stopped</b>     | Halted at a <i>gate</i> with a coded reason.            | Closure                      | Parada          |
| <b>Retired</b>     | Retired after G7 with the retirement plan executed.     | Closure                      | Retirada        |

The status of an initiative is different from the status of each system in the inventory (Under evaluation · In development · Pilot · In production · Suspended · Retired · Blocked; document 32 §3.3).

### 4.3 Statuses and mandatory status of *gate* criteria

| Status                | Meaning                                                                                                                                                                                       | Spanish   |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <b>Met</b>            | The criterion is met and the linked evidence is verified.                                                                                                                                     | Cumple    |
| <b>Not met</b>        | The criterion is not met or the evidence is not valid.                                                                                                                                        | No cumple |
| <b>Not applicable</b> | It does not apply because of the intensity, technology or classification, with a justification validated by the verifier. An unjustified <i>Not applicable</i> is treated as <i>Not met</i> . | No aplica |
| <b>Pending</b>        | The evidence or the verification is missing.                                                                                                                                                  | Pendiente |

| Mandatory status     | Meaning                                                                                            | Effect                                                                                           | Spanish       |
|----------------------|----------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------|---------------|
| <b>Yes</b>           | Mandatory and not conditionable.                                                                   | It must be <i>Met</i> or justified <i>Not applicable</i> for Proceed or Proceed with conditions. | Sí            |
| <b>Yes ♦</b>         | Mandatory, not conditionable and a critical security, legal compliance or human oversight control. | Same as <i>Yes</i> ; at Enterprise G5 it grounds the veto.                                       | Sí ♦          |
| <b>Conditionable</b> | Mandatory; its shortfall is not critical and the evidence exists.                                  | Allows Proceed with conditions.                                                                  | Condicionable |
| <b>Recommended</b>   | "Should".                                                                                          | Does not block; omitting it without justification is an observation.                             | Recomendado   |

Scope labels for criteria: **[GEN]** generative AI or agent · **[AG]** autonomy A1, A2 or A3 · **[TER]** an AI supplier is involved (document 21 §2.3).

## 4.4 Amount statuses

| Status           | Who assigns it                                                                           | Indicative expiry                                                                           | Use                                                                                                              | Spanish   |
|------------------|------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------|-----------|
| <b>Validated</b> | Management control or internal or external audit; never the benefiting area or the team. | 12 months from the close of the validated period, or earlier if there is a material change. | All reports and <i>gates</i> . The only status that substantiates materialised savings or measured return at G7. | validado  |
| <b>Declared</b>  | Area responsible for the benefit, with the sponsor's agreement.                          | 6 months without validation; after that, "declared, pending validation".                    | Reports and R6, identified as such. It does not replace validation when the criterion requires it.               | declarado |
| <b>Estimated</b> | AI Committee, board or assessment team.                                                  | 6 months or until the area declares the figure.                                             | Reports, identified as such. It does not substantiate realised value criteria.                                   | estimado  |

Expected value (phases 2 and 3) can only be estimated or declared. Recurring cost is deducted in full regardless of its status. An amount that expires is downgraded, not deleted.

## 4.5 Ambition levels

| Level            | What it means                                                                | Where the value lies                       | Uncertainty | Who decides                                                                   | Spanish     |
|------------------|------------------------------------------------------------------------------|--------------------------------------------|-------------|-------------------------------------------------------------------------------|-------------|
| <b>Optimise</b>  | Doing the same thing faster, more cheaply or with fewer errors.              | Mainly in efficiencies.                    | Low         | Area management, within the portfolio framework.                              | Optimizar   |
| <b>Augment</b>   | People do what they could not do before; the role changes, not the business. | Cost and performance.                      | Medium      | Management, with visibility for the AI Committee.                             | Aumentar    |
| <b>Transform</b> | Changes what is offered, how the company competes or how it is organised.    | Return and changes to the operating model. | High        | Board or senior management, with board approval at G2 and when scaling at G7. | Transformar |

Classification statuses: **Proposed** (phase 1) · **Confirmed** (G2) · **Actual** (G7 and, where appropriate, R6). The classification is made with the five questions (IT-P1 to IT-P5) and the decision rules in document

12 §3; in case of doubt, the lower level is assigned.

## 4.6 Intensity

| Intensity         | When                                                | Gates                                                          | Verification                       | Decision                                                                 | Go-live                         | R6          | Spanish    |
|-------------------|-----------------------------------------------------|----------------------------------------------------------------|------------------------------------|--------------------------------------------------------------------------|---------------------------------|-------------|------------|
| <b>Lite</b>       | No Enterprise criterion is met.                     | G0–G2 and G4–G5 may be grouped, keeping each list of criteria. | AI Office; AI Auditor by sampling. | Sponsor; with risk clearance at G3, G4 and G5.                           | Risk clearance.                 | Half-yearly | Lite       |
| <b>Enterprise</b> | At least one Enterprise criterion is met (01 §9.2). | All held separately.                                           | AI Auditor at all <i>gates</i> .   | AI Committee (G1: sponsor, informing the committee); board in Transform. | Multi-level sign-off with veto. | Quarterly   | Enterprise |

## 4.7 Risk

**Likelihood** (horizon of the initiative or twelve months in production):

| Value    | Name                  | Indicative reference                                             | Spanish     |
|----------|-----------------------|------------------------------------------------------------------|-------------|
| <b>1</b> | <b>Rare</b>           | Less than once in 5 years or < 5% over the initiative's horizon. | Rara        |
| <b>2</b> | <b>Unlikely</b>       | Once every 2–5 years or 5–20%.                                   | Improbable  |
| <b>3</b> | <b>Possible</b>       | Once every 1–2 years or 20–50%.                                  | Posible     |
| <b>4</b> | <b>Likely</b>         | Several times a year or 50–80%.                                  | Probable    |
| <b>5</b> | <b>Almost certain</b> | Monthly or more often, or > 80%.                                 | Casi segura |

**Impact**, assessed on five axes (economic, people and rights, regulatory, operational and reputational); the **highest** is taken:

| Value    | Name              | Reference on the economic axis (M = C2 materiality threshold) | Spanish        |
|----------|-------------------|---------------------------------------------------------------|----------------|
| <b>1</b> | <b>Negligible</b> | Less than 1% of M.                                            | Insignificante |
| <b>2</b> | <b>Minor</b>      | From 1% to 5% of M.                                           | Menor          |
| <b>3</b> | <b>Moderate</b>   | From 5% to 20% of M.                                          | Moderado       |

| Value | Name     | Reference on the economic axis (M = C2 materiality threshold)                                               | Spanish |
|-------|----------|-------------------------------------------------------------------------------------------------------------|---------|
| 4     | Major    | From 20% to 100% of M.                                                                                      | Grave   |
| 5     | Critical | More than M; on other axes, serious or irreversible harm, prohibited practice or possible serious incident. | Crítico |

**Level = likelihood × impact**, inherent (without specific controls) and residual (with controls):

| Level    | Score | Spanish |
|----------|-------|---------|
| Low      | 1–4   | Bajo    |
| Medium   | 5–9   | Medio   |
| High     | 10–15 | Alto    |
| Critical | 16–25 | Crítico |

#### Responses:

| Response        | When                                                                                                                                      | Spanish    |
|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------|------------|
| <b>Avoid</b>    | Unacceptable risk with no alternative: prohibited practice, Critical with no viable treatment, cost of the control higher than the value. | Evitar     |
| <b>Mitigate</b> | Usual response for Medium, High and Critical, with controls, owner, time limit and target residual.                                       | Mitigar    |
| <b>Transfer</b> | Significant economic impact with a transfer market. It does not transfer regulatory accountability or harm to people.                     | Transferir |
| <b>Accept</b>   | Residual within the appetite or disproportionate mitigation cost, by the competent level.                                                 | Aceptar    |

#### Acceptance of residual risk:

| Residual level | Accepted by                                                         |
|----------------|---------------------------------------------------------------------|
| Low            | AI Product Owner, with a record.                                    |
| Medium         | AI Sponsor, with risk clearance from the AI Risk Owner.             |
| High           | AI Committee, with a treatment plan and validity until the next R6. |

| Residual level  | Accepted by                                                                                                                                               |
|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Critical</b> | <b>Not accepted.</b> Exceptionally, only the board or its board committee, within the appetite approved in C2. Without that approval it blocks G3 and G5. |

Nobody accepts a risk of an initiative in which they are building. An impact of 5 on people and rights or on the regulatory axis is treated as at least High for acceptance purposes.

#### Control effectiveness:

| Effectiveness              | Criterion                                                                                       | Maximum reduction allowed                                             |
|----------------------------|-------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------|
| <b>Effective</b>           | Designed, implemented and tested with evidence in the last period, with no relevant exceptions. | Up to 2 levels of likelihood or impact.                               |
| <b>Partially effective</b> | Tested with exceptions, incomplete coverage or unsupervised manual dependency.                  | 1 level.                                                              |
| <b>Ineffective</b>         | The test fails or the control does not operate as designed.                                     | None; corrective action is opened.                                    |
| <b>Untested</b>            | Designed or implemented without an effectiveness test.                                          | None in the verified residual; it may be used in the target residual. |

Risk categories (codes of the typical risk catalogue): **EST** Strategic · **TEC** Technical · **DAT** Data · **ECO** Economic · **LEG** Legal and compliance · **ORG** Organisational · **REP** Reputational · **GEN** Generative AI and agents · **SEG** Security and offensive AI · **TER** Third parties.

## 4.8 Risk appetite

| Grade           | Meaning                                                              | Maximum residual risk within the appetite | Acceptance beyond that maximum                                                       | Spanish   |
|-----------------|----------------------------------------------------------------------|-------------------------------------------|--------------------------------------------------------------------------------------|-----------|
| <b>Averse</b>   | Risk is avoided even if it means forgoing opportunities.             | Low                                       | Medium or High: AI Committee, informing the board committee. Critical: not accepted. | Averso    |
| <b>Cautious</b> | Limited risk is accepted with robust controls.                       | Medium                                    | High: AI Committee, informing the board committee. Critical: not accepted.           | Cauteloso |
| <b>Moderate</b> | Risk is accepted in exchange for value, with proportionate controls. | High                                      | Critical: not accepted.                                                              | Moderado  |

| Grade       | Meaning                                          | Maximum residual risk within the appetite | Acceptance beyond that maximum                                                                                                                                 | Spanish |
|-------------|--------------------------------------------------|-------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| <b>Open</b> | High risks are accepted in bounded, staged bets. | High                                      | Critical: only exceptionally, by the board or its board committee, for a specific stage, with an investment cap and an exit plan. Not permitted in LEG or SEG. | Abierto |

The grade can only tighten the general acceptance rule (section 4.7), never relax it. Each category is accompanied by tolerance metrics with a **tolerance (amber)**, which requires analysis and a plan by the committee, and a **limit (red)**, which must not be exceeded and requires escalation to the board or its board committee.

## 4.9 Maturity

| Code      | Dimension                     | Spanish                          |
|-----------|-------------------------------|----------------------------------|
| <b>D1</b> | Strategy and governance       | Estrategia y gobierno            |
| <b>D2</b> | Value and portfolio           | Valor y cartera                  |
| <b>D3</b> | Data and knowledge            | Datos y conocimiento             |
| <b>D4</b> | Technology and operations     | Tecnología y operación           |
| <b>D5</b> | People and adoption           | Personas y adopción              |
| <b>D6</b> | Risk, security and compliance | Riesgo, seguridad y cumplimiento |
| <b>D7</b> | Measurement and evidence      | Medición y evidencia             |

| Level    | Name         | Description                                                            | Spanish       |
|----------|--------------|------------------------------------------------------------------------|---------------|
| <b>0</b> | Non-existent | There is no recognisable practice or owner.                            | Inexistente   |
| <b>1</b> | Initial      | Isolated practices that depend on specific people.                     | Inicial       |
| <b>2</b> | Developing   | Practice partly defined and applied in some cases or areas.            | En desarrollo |
| <b>3</b> | Defined      | Common practice, approved and applied across the whole assessed scope. | Definido      |

| Level | Name      | Description                                                                                     | Spanish    |
|-------|-----------|-------------------------------------------------------------------------------------------------|------------|
| 4     | Managed   | Practice measured with indicators and reviewed with data for at least two consecutive quarters. | Gestionado |
| 5     | Optimised | Continuous improvement with the company's own data for at least one full C5 cycle.              | Optimizado |

Rules: whole and cumulative levels; each criterion requires verified evidence; **overall level** = weighted average rounded down and capped at the lowest level of D1 or D6 plus one; equal weights by default, or those set and declared by the company in C2. Questionnaire answers: Yes · Partial · No · Not applicable.

## 4.10 Grades of spheres 08 and 09

| Sphere                                     | Dimensions                                                         |
|--------------------------------------------|--------------------------------------------------------------------|
| 08 · Regulation, ethics and accountability | Compliance · Anticipation · Ethical leadership                     |
| 09 · AI governance                         | Structure · Balance between speed and control · Supplier ecosystem |

| Grade             | General criterion                                                                                                     | Minimum evidence                                             | Spanish     |
|-------------------|-----------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------|-------------|
| <b>Absent</b>     | There is no defined owner or practice, or they exist only on an ad hoc and undocumented basis.                        | —                                                            | Ausente     |
| <b>Basic</b>      | Practices and owners exist, but they depend on specific people or projects and do not cover the whole scope.          | Partial documents or records.                                | Básico      |
| <b>Systematic</b> | Defined, approved process applied to the whole scope, with owners and verifiable evidence.                            | Approved procedure, complete records, calculated indicators. | Sistemático |
| <b>Advanced</b>   | Systematic, with indicators on target for at least two quarters, continuous improvement and review by the third line. | Audit report with no open major nonconformities.             | Avanzado    |

Spheres 08 and 09 are not assessed with Optimise, Augment and Transform. Their grades are not maturity levels: they serve as evidence for D1 and D6.

### 4.11 Autonomy of systems and agents

| Level | Name              | What the system does                                                          | Human role                                                | Spanish               |
|-------|-------------------|-------------------------------------------------------------------------------|-----------------------------------------------------------|-----------------------|
| A0    | Assistance        | Informs, summarises or generates content.                                     | The person decides and executes.                          | Asistencia            |
| A1    | Recommendation    | Proposes a specific decision or action.                                       | The person validates each action before it is executed.   | Recomendación         |
| A2    | Supervised action | Executes actions within defined limits.                                       | Supervises, can interrupt and reviews after the fact.     | Actuación supervisada |
| A3    | Autonomous action | Executes sequences of actions without individual review within strict limits. | Sets limits, supervises aggregates and has a kill switch. | Actuación autónoma    |

A2 or A3 with an effect on third parties, money, personal data or production systems is an Enterprise criterion. A3 requires a decision by the AI Committee at G4 and G5.

### 4.12 AI incident severity

| Severity      | Main criteria (one is enough)                                                                                                                                                                                                                                                                                                                                        | Spanish    |
|---------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| S1 · Critical | Possible serious incident under the AI Act ; possible major DORA incident or significant NIS2 incident; personal data breach with a likely high risk; unauthorised action by an agent with an effect on money, third parties, personal data or production; harm to people or discrimination at scale; critical function outside its tolerance; impact 5 on any axis. | S1 Crítica |
| S2 · High     | Impact 4; reportable breach without high risk; repeated errors visible to customers; agent identity compromised and contained; failure of a critical control without harm; relevant incident at an N3 supplier.                                                                                                                                                      | S2 Alta    |
| S3 · Medium   | Impact 3; degradation beyond threshold in a relevant process; successful prompt injection without a sensitive action; limited internal leakage with no risk to individuals.                                                                                                                                                                                          | S3 Media   |
| S4 · Low      | Impact 1–2; near misses; blocked attempts that reveal a new threat.                                                                                                                                                                                                                                                                                                  | S4 Baja    |

Indicative response times and regulatory notifications are set out in document 37 §4.3 and §5. Incident severity is not mixed with the nonconformity scale.

## 4.13 Nonconformities

| Type            | Criterion                                                                                                                               | Containment                                                              | Action plan                            | Reports to                        | Spanish                |
|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------|----------------------------------------|-----------------------------------|------------------------|
| <b>Critical</b> | Exposes to immediate serious harm or to a serious legal infringement, or nullifies the framework's control over a system in production. | Immediate, maximum 48 hours, including stopping the system if necessary. | Maximum 10 days.                       | AI Committee and board committee. | no conformidad crítica |
| <b>Major</b>    | Affects the validity of a decision, segregation of duties or a relevant control, without immediate serious harm.                        | Maximum 10 days.                                                         | Maximum 30 days.                       | AI Committee.                     | no conformidad mayor   |
| <b>Minor</b>    | Isolated breach with no impact on decisions or relevant controls.                                                                       | Not required.                                                            | Before the next <i>gate</i> or review. | AI Office.                        | no conformidad menor   |

The time limits are reference values and the company may adjust them in C2 without exceeding those of the applicable regulation. The full process is in document 37 §3. **Recurrence:** a minor nonconformity repeated three times in twelve months in the same initiative or process is classified as major (37 §3.3; 21 §10.5; 38 §8.1).

## 4.14 Third-party requirements

| Level                | Service criticality                                                      | Data processed                                                                                     | Autonomy                                                                        | Substitutability                                           | Spanish      |
|----------------------|--------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------|------------------------------------------------------------|--------------|
| <b>N1 · Standard</b> | Internal process with impact 1–2.                                        | Public or non-sensitive internal data.                                                             | A0                                                                              | Less than 3 months without relevant cost.                  | N1 Estándar  |
| <b>N2 · Enhanced</b> | Relevant process with impact 3; direct exposure; decisions about people. | Personal data or confidential information.                                                         | A1, or A2 with no effects on third parties, money, personal data or production. | 3 to 12 months or relevant cost.                           | N2 Reforzado |
| <b>N3 · Critical</b> | Critical or important function; impact 4–5; high-risk system.            | Special categories, large-scale personal data, trade secrets or critical confidential information. | A2 or A3 with those effects.                                                    | More than 12 months, cost higher than M or no alternative. | N3 Crítico   |

The level is the highest resulting from any of the four factors and is determined for each supplier–service relationship.

## 4.15 Verification and audit outcomes

| Outcome                             | In the verification of a <i>gate</i>                                                                                                                                   | In a subsequent audit                         | Spanish                    |
|-------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------|----------------------------|
| <b>Conformant</b>                   | Complete and valid evidence; criteria statuses correctly assigned. The request moves on to the deciding body.                                                          | No findings, except observations.             | Conforme                   |
| <b>Conformant with observations</b> | Shortcomings that do not affect <i>Yes</i> criteria or the validity of the evidence. It moves on to the decision-maker with observations, which may become conditions. | Observations and minor nonconformities.       | Conforme con observaciones |
| <b>Nonconformant</b>                | Some mandatory evidence is missing or some evidence is not valid. The request returns to the team without a decision.                                                  | At least one major or critical nonconformity. | No conforme                |

A *Conformant* outcome does not mean that the initiative should proceed: it means that the body can decide on a verified basis. With a *Nonconformant* outcome in the verification of a *gate*, the request returns to the team without a decision (01 §7.4, rule 2): the body does not decide Proceed, Proceed with conditions, Iterate, Pivot or Stop on unverified evidence, unless the team withdraws the request and proposes to stop (21 §10.2; 38 §8.2). Finding classes: Observation · Minor · major · critical nonconformity.

## 4.16 Transformation index: scoring and profiles

| Score for each signal | Meaning                                                                   |
|-----------------------|---------------------------------------------------------------------------|
| <b>0</b>              | No data, or exploration situation.                                        |
| <b>1</b>              | Efficiency reading (includes a measured value that turns out to be zero). |
| <b>2</b>              | Intermediate reading.                                                     |
| <b>3</b>              | Transformation reading.                                                   |

| Profile                      | Description                                                                       | Spanish              |
|------------------------------|-----------------------------------------------------------------------------------|----------------------|
| <b>Scattered exploration</b> | Pilots without a portfolio, without measurement and without an ambition decision. | Exploración dispersa |
| <b>Tactical efficiency</b>   | Optimisation use cases in production with partially measured value.               | Eficiencia táctica   |

| Profile                                        | Description                                                                              | Spanish                                  |
|------------------------------------------------|------------------------------------------------------------------------------------------|------------------------------------------|
| <b>Efficiency at scale</b>                     | Governed optimisation portfolio, with validated value and materialised capacity.         | Eficiencia a escala                      |
| <b>Transformation under way</b>                | Augment and Transform bets decided by the board, in production and with measured return. | Transformación en curso                  |
| <b>Declared but unevidenced transformation</b> | The narrative is one of transformation, but the signals show efficiency or exploration.  | Transformación declarada, no evidenciada |

The profile is assigned using the rules in document 12 §5 (evidenced profile and cross-check against the transformation declaration), not by the sum of points. If coverage is below 6 of 8 signals, the profile is provisional; with D7 below 2, the index is presented with a low-reliability warning.

## 4.17 Response formats for the board

| Format                                   | When it is used                                                                                                              | Spanish                      |
|------------------------------------------|------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>"Yes"</b>                             | Affirmative answer with verified evidence.                                                                                   | Sí                           |
| <b>"Yes, with one condition: ..."</b>    | Affirmative if something specific is met, with a single condition, owner and time limit. Not possible for critical controls. | Sí, con una condición        |
| <b>"Not yet, because ... is missing"</b> | May become affirmative; it generates a recorded commitment.                                                                  | Todavía no, porque falta ... |
| <b>"No, because ..."</b>                 | Negative answer, with a reason and an alternative if there is one.                                                           | No, porque...                |

"It depends" is not given as an answer. Maximum number of cases presented in detail per session: three.

## 4.18 Statuses and assessment of board recommendations

| Declared status    | Meaning                                                               | Spanish   |
|--------------------|-----------------------------------------------------------------------|-----------|
| <b>Pending</b>     | Work has not started.                                                 | Pendiente |
| <b>In progress</b> | Work has started and has not been completed.                          | En curso  |
| <b>Met</b>         | The recipient considers the recommendation met and provides evidence. | Cumplida  |

| Declared status  | Meaning                                                                                       | Spanish    |
|------------------|-----------------------------------------------------------------------------------------------|------------|
| <b>Discarded</b> | The recipient proposes not to carry it out; this requires the acceptance of the issuing body. | Descartada |

| Independent assessment              | Meaning                                                          | Spanish                    |
|-------------------------------------|------------------------------------------------------------------|----------------------------|
| <b>Conformant</b>                   | The evidence demonstrates compliance.                            | Conforme                   |
| <b>Conformant with observations</b> | The essentials are met; non-critical aspects remain.             | Conforme con observaciones |
| <b>Nonconformant</b>                | The evidence does not demonstrate compliance or is insufficient. | No conforme                |
| <b>Not assessed</b>                 | Initial assessment status.                                       | Sin valorar                |

Calculated alerts, which are not statuses: Overdue · Not updated · Awaiting assessment · Discrepancy · Repeated rescheduling (document 62 §5).

## 05

# Controlled taxonomy of the register

Faithful copy of 03 §3.3. Any change to these lists is made at the same time in both documents and in tools T01–T05.

## Initiative record

| Block                 | Main fields                                                                                                                                                   |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Identification</b> | Unique code (IA-AAAA-NNN), name, plain-language description of what it is and what it is used for, area, registration date.                                   |
| <b>Owners</b>         | Sponsor, product owner, technical owner, operations owner, risk owner and assigned auditor.                                                                   |
| <b>Classification</b> | Primary and secondary sphere; proposed, confirmed and actual ambition level; intensity; regulatory classification; technology; exposure; suppliers.           |
| <b>Lifecycle</b>      | Current phase, status, phase entry date, reference time limit, current iteration.                                                                             |
| <b>Value</b>          | Expected value (efficiencies, return, recurring cost) with formula; realised value with validated, declared or estimated status; investment made and pending. |

| Block                      | Main fields                                                                                                 |
|----------------------------|-------------------------------------------------------------------------------------------------------------|
| <b>Risk and compliance</b> | Main residual risk level, impact assessments carried out, open conditions, open nonconformities, incidents. |
| <b>Free tags</b>           | Programme, strategic initiative, internal customer or other company-specific groupings.                     |

## Controlled taxonomy

| Tag                              | Values                                                                                                                                                                                                                 |

| <b>INF-AAAA-NNN</b>                          | Year + sequential number                              | Information and consultation with employee representatives.                          | 50 §7; P46        | INF-2026-002      |
| <b>PA-AAAA-NNN · Hnn</b>                     | Year + sequential number; finding within the campaign | Adversarial testing campaigns and their findings.                                    | 35 §8; P53        | PA-2026-001 · H03 |
| <b>IDN-AAAA-NNN</b>                          | Year of registration + sequential number              | Non-human identities (agents, service accounts, keys).                               | 35 §4.1; P54      | IDN-2026-009      |

Common rules:

1. **Persistence.** Codes are neither reused nor restarted. A retired element keeps its code with the status retired.
2. **Year.** In codes with AAAA, the year is that of registration or detection and does not change even if the element continues into subsequent years.
3. **Sequential numbers.** NNN is a three-digit sequential number per code type and company.
4. **Separators.** A hyphen between the parts of an identifier (IA-2026-014), a point between gate and criterion (G3.08) and a middle dot with spaces to link a risk to its initiative (IA-2026-014 · R03).
5. **Previous codes.** If the company had previous identifiers, they are kept in a previous identifier field.

## 6.2 Prefixed codes and locally used numbering

The former local numbering in documents 12 and 50 (P1–P5, S1–S8 and D1–D3 of the index; D1–D5 and P-A–P-F of people) looked the same as official codes. It is replaced by **codes prefixed by document**, which can be cited outside their document without risk of confusion: **IT-** (transformation index, document 12) and **PER-** (people and organisation, document 50). The other numbering in this table remains local and **must not** be used outside its document without the full name:

| Code or numbering                                                                                                        | Meaning                                                                           | Document          | How it is cited elsewhere                                   | Not to be confused with                                            |
|--------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|-------------------|-------------------------------------------------------------|--------------------------------------------------------------------|
| <b>IT-P1-IT-P5</b>                                                                                                       | Five ambition classification questions (formerly P1-P5)                           | 12 §3.1           | "IT-P4" or "question IT-P4 of document 12"                  | P01-P71 (templates)                                                |
| <b>IT-S1-IT-S8</b>                                                                                                       | Eight signals of the transformation index (formerly S1-S8)                        | 12 §4.4           | "IT-S7" or "signal 7 of the index"                          | S1-S4 (severity)                                                   |

|----------------|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>T01</b>     | Initiative register     | Implements the controlled taxonomy (section 5), initiative and criterion statuses (sections 4.2 and 4.3), <i>gate</i> outcomes (4.1) and IA-AAAA-NNN codes. First tool of wave 1, built after this document. |
| <b>T02</b>     | AI system inventory     | Uses the SIA-AAAA-NNN codes, regulatory classification and autonomy A0–A3.                                                                                                                                   |
| <b>T03</b>     | <i>Gate</i> manager     | Uses the G<n>.<nn> and R6.<nn> codes, the mandatory status of criteria, the EV rules and the outcomes permitted by gate.                                                                                     |
| <b>T04</b>     | Intensity determination | Uses the Enterprise criteria and the scale in section 4.6.                                                                                                                                                   |
| <b>T05</b>     | Ambition classifier     | Uses the ambition levels and statuses in section 4.5.                                                                                                                                                        |
| <b>T06–T22</b> | Other tools             | Use the risk, appetite, maturity, severity, nonconformity, third-party, index and value scales in section 4.                                                                                                 |
| <b>P01–P71</b> | Block H templates       | Use the terms in section 3 and the codes in section 6. No template defines terms of its own.                                                                                                                 |

| <b>1.0</b> | 16-09-2026 | Final library version v0.1. The cover is updated to in-force status and the AI self-consulting principle is added with an editorial criterion: didactic explanations oriented towards decision-making and tool use, without a course format. Consistency adjustments: 70 typical risks (RT-ORG-07 to RT-ORG-09), 156 indicators in 13 families in document 41 (new PRO family) and provisional CNC- prefix for the knowledge indicators in document 51.                                                                                                                                 |
| <b>0.1</b> | 16-09-2026 | First version. Sets the order of precedence between sources, the normative language and drafting conventions, the alphabetical glossary with English equivalents, 18 official scales (including the R6 outcomes and the grades of appetite and of spheres 08 and 09), the copy of the controlled taxonomy in 03 §3.3, the code system with the proposed SIA, DEC and AUD codes, the IT- and PER- prefixed codes that replace the local numbering of documents 12 and 50, the locally used numbering that must not be used outside its document, the library numbering and the acronyms. |
