TEMPLATE P73 · AI GOVERNANCE PROFILE (NIST AI RMF)

AI governance profile (NIST AI RMF)

Describes, for each NIST AI RMF subcategory, the current level with its evidence, the target level set by the company, the gap and the action that closes it, on the SEVEN-G 0–5 scale.

Legal notice and disclaimer. SEVEN-G is a reference methodological framework provided "as is" and for information purposes only. It does not constitute legal, regulatory, financial or professional advice, nor does it guarantee compliance with any law or standard. References to general regulation (such as the EU AI Act, the GDPR, DORA or NIS2), to technical standards and to regulation specific to each sector or jurisdiction may be incomplete, may not apply to a particular case or may become out of date as a result of regulatory changes, interpretations or supervisory positions after their consultation date. **Each organisation that uses SEVEN-G is solely responsible for identifying the regulation that applies to it, verifying that it is current and certifying its own regulatory compliance**, with the appropriate qualified advice. This methodology is a generic, free aid shared with the community so that nobody has to start from scratch; each person or organisation can and should adapt it to its own use. It must not be inferred that its legally sensitive parts have been reviewed by legal counsel: those reviews, for each company or sector, are the ultimate responsibility of the company, consultant or organisation that uses it. Although every effort is made to keep it up to date, some regulation may have changed without being reflected here. To the fullest extent permitted by law, the author accepts no responsibility whatsoever for the effects of its application in any organisation or for its full applicability. The methodology does not grant certification of any kind. The author accepts no liability for any use made of this content or for any decisions taken on the basis of it. The data, figures, companies and cases in the examples are fictitious or illustrative.

Why it matters. The NIST AI RMF organises AI governance into verifiable outcomes, but it does not set a scale to measure how far each one has progressed. This profile uses the SEVEN-G maturity scale and derives each level from the already verified questionnaire of document 11: the board sees a single number per outcome, the characteristics of trustworthy AI (bias, transparency, accountability, human oversight) are visible and the gap against the target turns into actions with an owner, without a second assessment.

01

Instructions for use

Aspect	Guidance
When it is used	After each verified maturity assessment in **C1** and **C5** (P34), and when the company wants to report with the NIST AI RMF to its risk committee, a customer or a supervisor. The target level is set in **C2**.
Who completes it	The AI Office, on the basis of the P34 answer sheet; the "Own" subcategories are assessed by the same assessment team with the rules in 11 §4.
Who verifies it	The independent verifier of the maturity assessment (11 §4.2), who also reviews all "Own" subcategories at level 3 or above.
Who decides or approves	The AI Committee approves the profile and the proposed target levels; the board or its board committee approves the target levels in C2.
Stage of the corporate cycle	C1 and C5 (current profile), C2 (target profile), C4 (monitoring of actions).
Tool	T15 · Maturity assessment calculates this profile in its "AI RMF profile" view: level derived from the questionnaire, own levels, targets, gap, equivalent *tier* and CSV export, and saves its summary into the T01 register. This template is its paper or Word equivalent.
Reference document	Document 34 §5.4 (subcategories, coverage in SEVEN-G and associated questions); document 11 §2.2 (levels and equivalence with *tiers*) and §7.5 (derivation rule).
Lite versus Enterprise	In Lite scope the company may select only the GOVERN subcategories and those that correspond to its Enterprise initiatives, and leave the others out of the profile with a reason.

Completion rules:

- **Current level**: the one that results from 11 §7.5: the level of the reference dimension, lowered to the level below that of the lowest-level associated question that is not at "Yes" or "Not applicable". For "Own" subcategories, the level evidenced, without exceeding the level of its dimension.
- **Without verified evidence, no level is evidenced**: a subcategory assessed without evidence stays at 0; one that was not assessed is left blank ("no data"), which is not 0.
- **Evidence**: for derived subcategories it is enough to cite the P34 questions and their answer; for "Own" ones, the traceable reference to the evidence (author, date and version). P34 evidence is not copied here.
- **Gap** = target level − current level. **Equivalent *tier***: a view calculated with the table in 11 §2.2 (0–1 → 1; 2 → 2; 3 → 3; 4–5 → 4), never a separate data item.
- The description of each subcategory is in 34 §5.4; the NIST text is not reproduced here.

02

Identification

Field	Content	Guidance
Company and perimeter		The same as the maturity assessment from which it is derived.
Profile identifier		Proposed format PG-YYYY-MM.
Source maturity assessment		Identifier (EM-YYYY-MM), assessment type and cut-off date of P34.
AI RMF version		NIST AI 100-1, version 1.0, until NIST publishes another.
Selected subcategories		By default, all 72; excluded ones are listed with their reason in section 7.
Date of approval of the target profile		C2 minutes.

03

GOVERN

Subcategory	Level from document 11	Current level (0–5)	Evidence or P34 questions	Target level	Gap	Equiv. *tier*	Action

07

Characteristics of trustworthy AI

The AI RMF describes seven characteristics of trustworthy AI. This table makes them visible to the board: it takes the **lowest** level of the subcategories that assess them most directly.

Characteristic	Subcategories that assess it	Current level (minimum)	Target level	Gap
Valid and reliable	MEASURE 2.5, MEASURE 2.3			
Safe for people (free from harm)	MEASURE 2.6, MANAGE 2.4			
Secure and resilient against attacks	MEASURE 2.7, MANAGE 3.2			
Accountable and transparent	MEASURE 2.8, GOVERN 2.1, GOVERN 2.3			
Explainable and interpretable	MEASURE 2.9, MAP 2.2			
Privacy-enhanced	MEASURE 2.10			

Characteristic	Subcategories that assess it	Current level (minimum)	Target level	Gap
Fair, with harmful bias managed	MEASURE 2.11, GOVERN 3.1			
Human oversight (cross-cutting)	MAP 3.5, GOVERN 3.2			

Subcategories excluded from the profile

Subcategory	Reason for exclusion	Who decides it

08

Summary by function

Function	Selected subcategories	With level · no data	Minimum current level	Most frequent current level	Subcategories with a gap
GOVERN	19				
MAP	18				
MEASURE	22				
MANAGE	13				
Total	**72**				

09

Action plan

Actions are added to the improvement plan of the maturity report (P34 §6.6) with the same code; here they are only linked to the subcategories they close.

Code	Subcategories	Action	Owner	Deadline	Closure criterion
AM-YYYY-NN					

Code	Subcategories	Action	Owner	Deadline	Closure criterion
***(illustrative example)* AM-2026-03**	MEASURE 2.11	Apply bias tests with counterfactual pairs to all initiatives with decisions about people, with a threshold in P17.	AI Risk Owner	31-12-2026	Subcategory at level 3 with verified evidence in the next assessment.

10

Quality criteria

#	Check	Status
1	The profile is derived from a verified maturity assessment, identified in section 2.	Met · Not met · Not applicable · Pending
2	Each derived level applies the rule in 11 §7.5 with the questions in 34 §5.4; no level has been set by hand without evidence.	
3	Subcategories that were not assessed appear as "no data", not as 0.	
4	No "Own" subcategory exceeds the level of its reference dimension.	
5	The target levels are approved in C2 and proportionate to ambition and risk (11 §8).	
6	The equivalent *tier* has been calculated with the table in 11 §2.2 and is not presented as the company's CSF *tier*.	
7	Each gap has an action with an owner, deadline and closure criterion in P34 §6.6.	

11

Approval and verification

Function	SEVEN-G role	Name and position	Date	Signature or reference
Prepares the profile	AI Office			
Verifies	Independent verifier of the maturity assessment			

Function	SEVEN-G role	Name and position	Date	Signature or reference
Approves the profile and proposes the targets	AI Committee			
Approves the target levels	Board or its board committee (C2)			

Segregation of duties: whoever is responsible for a dimension does not assess its subcategories; the verifier has not taken part in the assessment.

12

Version control

Completed document

Version	Date	Author	Changes

Template

Version	Date	Changes
0.1	25-09-2026	First version. Current and target profile of the 72 subcategories of the NIST AI RMF 1.0 on the 0–5 scale of document 11, with the level derived from the questionnaire (11 §7.5), the gap, the equivalent *tier* as a view, the seven characteristics of trustworthy AI plus human oversight and the action plan linked to P34.
