Legal notice and disclaimer. SEVEN-G is a reference methodological framework provided "as is" and for information purposes only. It does not constitute legal, regulatory, financial or professional advice, nor does it guarantee compliance with any law or standard. References to general regulation (such as the EU AI Act, the GDPR, DORA or NIS2), to technical standards and to regulation specific to each sector or jurisdiction may be incomplete, may not apply to a particular case or may become out of date as a result of regulatory changes, interpretations or supervisory positions after their consultation date. **Each organisation that uses SEVEN-G is solely responsible for identifying the regulation that applies to it, verifying that it is current and certifying its own regulatory compliance,** with the appropriate qualified advice. The author and SEACHAD accept no liability for any use made of this content or for any decisions taken on the basis of it. The data, figures, companies and cases in the examples are fictitious or illustrative.

01

Purpose

This document serves two functions:

1. It defines the **initiative register**, the central SEVEN-G tool. It manages each AI initiative the way a salesperson manages an opportunity in a CRM: it knows which phase the initiative is in, how long it has been there, which criteria it meets and which it does not, what value is expected and why it was stopped if it did not move forward.
2. It maintains the framework's **tool catalogue**: which tools exist or are needed, what they are for, at what point in the cycle they are used, which document they depend on and when they should be built.

Tool design principles

#	Principle	What it means
1	A single data model	All tools read from and write to the same model (section 4). The board dashboard, reports and alerts are fed from the register, without re-entering data.
2	Every change is a dated event	Phase entries and exits, decisions and classification changes are recorded with date, author and reason. Without a history there is no measurement of timings and no audit.
3	Controlled taxonomy	The main tags use closed lists defined in the framework, so that the portfolio can be filtered, compared and aggregated. Free tags are allowed as a complement.
4	Evidence linked, not copied	The tools record the link, version and verification status of each piece of evidence; the document itself lives in the company's document repository.
5	Portability	The reference tools work without a server, in HTML with data in JSON, and export to spreadsheet. The data model can be implemented in the CRM, risk management tool or project management platform that the company already uses.
6	The data belongs to the company	The tools do not send data to third parties. Demonstrations always use fictitious data.
7	"No data" is not zero	A missing value is shown as missing and is never replaced by an undeclared estimate.

The initiative register

3.1 The CRM analogy

In a sales CRM	In the SEVEN-G initiative register
Opportunity	AI initiative
Funnel stage	Lifecycle phase (0–7)
Stage transition	Decision gate (<i>gate</i>) with recorded outcome
Days in stage	Time in phase and decision time for each gate

In a sales CRM	In the SEVEN-G initiative register
Requirements to advance	Gate criteria: met, not met, not applicable or pending, with evidence
Opportunity amount	Expected value; later, declared, estimated and validated value
Probability of closing	Historical probability of reaching production from each phase, calculated with the company's own data
Sales forecast	Weighted portfolio value
Loss reason	Stop or retirement reason, coded
Owner	Sponsor and product owner
Account or segment	Area, sphere, ambition level, technology and other tags
Activities	Linked evidence, decisions, conditions, risks and incidents
Stalled opportunities	Initiatives that exceed the reference time limit for their phase

3.2 Initiative statuses

In addition to the phase, each initiative has a status that indicates what is happening to it.

Initiative statuses

The phase shows where it is; the status, what is happening to it

Source: SEVEN-G · SEACHAD

Status	Meaning	Counts towards time in phase
Registered	Idea registered, without an approved phase 0 yet.	No
In phase	The phase activities are being carried out.	Yes

Status	Meaning	Counts towards time in phase
Awaiting gate	Evidence submitted; awaiting verification and decision.	Yes, and decision time is also counted
On hold	Halted for a recorded external cause (budget, dependency, supplier, data). Requires a reason and an expected resumption date.	Measured separately
In production	G5 passed; in operation with continuity reviews.	Time in production is measured
Awaiting G7	Decision on scaling, iteration or retirement under way.	Yes
Stopped	Halted at a <i>gate</i> with a coded reason.	Closure
Retired	Retired after G7 with the retirement plan executed.	Closure

3.3 What is recorded

Initiative record

Block	Main fields
Identification	Unique code (IA-AAAA-NNN), name, plain-language description of what it is and what it is used for, area, registration date.
Owners	Sponsor, product owner, technical owner, operations owner, risk owner and assigned auditor.
Classification	Primary and secondary sphere; proposed, confirmed and actual ambition level; intensity; regulatory classification; technology; exposure; suppliers.
Lifecycle	Current phase, status, phase entry date, reference time limit, current iteration.
Value	Expected value (efficiencies, return, recurring cost) with formula; realised value with validated, declared or estimated status; investment made and pending.
Risk and compliance	Main residual risk level, impact assessments carried out, open conditions, open nonconformities, incidents.
Free tags	Programme, strategic initiative, internal customer or other company-specific groupings.

Controlled taxonomy

Tag	Values
Sphere	01 Customer · 02 Product and service · 03 People · 04 Operations · 05 Data · 06 Knowledge · 07 Decision · 08 Regulation, ethics and accountability · 09 AI governance
Ambition level	Optimise · Augment · Transform
Intensity	Lite · Enterprise
Regulatory classification	Prohibited · High risk · Transparency obligations · Minimal risk · Out of scope · Pending classification
Technology	Predictive ML · Generative AI · Agent · Language and document processing · Vision · Optimisation · Embedded third-party AI · Rules (not AI)
Exposure	Internal · Employees · Customers indirectly · Customers or external persons directly
Value type	Efficiency · Return · Avoided risk · Compliance
Stop or retirement reason	No plausible value · Hypothesis refuted · Insufficient data · Technically unfeasible · Cost exceeds value · Unacceptable risk · Regulation · No adoption · Replaced by another solution · Change in strategic priority

Events

Each of the following occurrences generates an event with date, author and comment: registration; phase entry and exit; *gate* request; verification; decision with outcome; creation, fulfilment or expiry of conditions; placing on hold and resumption; change of classification (ambition, intensity, regulatory); incident; nonconformity; stop; retirement.

3.4 Decision gate compliance

Each *gate* is recorded as a list of criteria. Each criterion has one of four statuses:

Status	Meaning
Met	The criterion is met and the linked evidence is verified.
Not met	The criterion is not met or the evidence is not valid.
Not applicable	The criterion does not apply because of the intensity, technology or classification, with justification.
Pending	The evidence or the verification is missing.

Based on these statuses, the register calculates the **gate compliance rate** (criteria met out of those applicable), shows **which criteria are blocking** the decision and prevents **Proceed** from being recorded if any mandatory criteria are *Not met* or *Pending*. The conditions of a **Proceed with conditions** outcome are recorded with a deadline and an owner, and trigger an alert when they expire.

3.5 Funnel metrics

The AI portfolio as a funnel

Initiatives in each phase, median days in phase and conversion at each decision gate. Illustrative data

Illustrative data, not representing any organisation. Source: SEVEN-G · SEACHAD

Metric	Definition	Purpose	Who uses it
Time in phase	Days between entry into and exit from the phase, excluding time on hold. Median and 80th percentile.	Detect bottlenecks.	AI Office, committee
Decision time	Days between the <i>gate</i> request and the decision.	Measure the agility of governance itself.	Committee, board
Time to production	Days from registration to G5; broken down into idea → feasibility approval (G3) → production.	Measure the real speed of the portfolio.	Committee, board
Conversion per gate	Percentage of initiatives that proceed at each <i>gate</i> versus those that iterate, pivot or stop.	Know where the portfolio is filtered and whether the filter is in the right place.	Committee
Iterations per gate	Average number of iterations before the decision.	Detect poorly prepared evidence or unclear criteria.	AI Office

Metric	Definition	Purpose	Who uses it
Stalled initiatives	Initiatives that exceed the reference time limit for their phase.	Act before they turn into cost with no return.	Committee
Time on hold	Days on hold and reasons.	Distinguish internal delays from external dependencies.	Committee
Stop and retirement reasons	Distribution of the coded reasons.	Learn which types of initiative should not enter the portfolio.	Committee, C5
Gate compliance	Average compliance rate and the criteria that block most often.	Improve evidence preparation.	AI Office
Expired conditions	Open conditions past their deadline.	Prevent "with conditions" from becoming "without control".	Committee, audit
Value by phase	Expected value of the initiatives in each phase.	See where the portfolio's value lies.	Committee, board
Weighted value	Sum of the expected value multiplied by the historical probability of reaching production from the current phase. Shown only when there is sufficient history.	Estimate the future value of the portfolio prudently.	Board
Ambition mix by phase	Distribution of Optimise, Augment and Transform in each phase.	Detect whether transformation bets get stuck before production (a transformation index signal).	Board
Cohorts	The above metrics by quarter of registration.	Check whether the system improves over time.	C5

All metrics can be segmented by any taxonomy tag: sphere, ambition, intensity, technology, area or supplier.

3.6 Reference time limits per phase

The time limits make it possible to identify stalled initiatives. The company approves them in C2 and recalibrates them in C5 with its own data. The following values are **indicative, as a starting point**:

Phase	Lite	Enterprise
0 · Context and constraints	10 days	20 days
1 · Discovery	20 days	30 days

Phase	Lite	Enterprise
2 · Value hypothesis	20 days	30 days
3 · Feasibility and risk	20 days	45 days
4 · Solution design	20 days	45 days
5 · Delivery and validation	60 days	90 days
7 · Evolution or retirement	15 days	30 days
Gate decision (from the request)	5 working days	10 working days

Phase 6 has no time limit; it is controlled through the frequency of the continuity review.

3.7 Views

View	What it shows
Funnel	Initiatives by phase and status, with time-limit alerts; can be filtered by tags.
Kanban board	Cards by phase that move when the <i>gate</i> decision is recorded.
Record	Initiative data, event timeline, criteria for the current <i>gate</i> , conditions, risks and value.
Pending gates	Requests awaiting verification or decision, with days elapsed.
Alerts	Stalled initiatives, expired conditions, overdue continuity reviews, evidence awaiting verification.
Analysis	Funnel metrics, cohorts and segmentation.
Data	Import of one or several JSON files (replacing or merging by code) and export of the full register. The full JSON is the input of the board dashboard (T17): the connector converts it into the dashboard JSON, with the funnel and the time spent in each stage taken from the phases and events of the register.

04

Common data model

The model is the foundation of all the tools. Its full specification (fields, types, lists and validation rules) will be published as a schema together with the first version of the register.

Entity	What it represents	Related to
Initiative	The unit that goes through the lifecycle.	All the others
AI system	Each system in the inventory, in-house or third-party, including corporate use.	Initiatives, suppliers, risks, incidents
Event	Any change with date, author and reason.	Initiative
Gate decision	Request, verification, decision, outcome and iteration.	Initiative, criteria, conditions
Assessed criterion	Status of each criterion in a <i>gate</i> decision.	Gate decision, evidence
Condition	Condition imposed with deadline, owner and status.	Gate decision
Evidence	Link, type, version, author, date and verification.	Criteria, initiative
Value	Amounts by type (efficiency, return, cost), formula, validation status and period.	Initiative
Risk	Risk with probability, impact, inherent and residual level, owner and controls.	Initiative, system
Nonconformity	Type, detection, containment, root cause, action, closure.	Initiative, system
Incident	Date, severity, detection, containment, notifications.	System, initiative
Supplier	Third party, services, criticality, contract, assessment.	Systems, initiatives
Recommendation	Board recommendation with persistent identifier, addressee, status and evidence.	Initiatives, systems

05

Tool catalogue

Priority: 1 = core, built first · 2 = needed for full governance · 3 = complement. **Status:** Available (HTML application in [herramientas/](#)) · Applied with templates or documents (no dedicated application; the template or document indicated contains the full procedure).

5.1 Portfolio and lifecycle management

Code	Tool	Purpose	Where it is used	Format	Depends on	Priority	Status
T01	Initiative register	CRM-style funnel: phases, statuses, events, tags, value and metrics.	Entire cycle; C3 and C4	HTML + JSON; export to spreadsheet	01, 02	1	Available v0.1
T02	AI system inventory	Register of all systems, including third-party systems and corporate use.	C1, phase 0, C4	T01 module	01, 32	1	Available v0.1
T03	Gate manager	Criteria with status, evidence, verification, decision and conditions.	All <i>gates</i>	T01 module	01, 21, 22	1	Available v0.1 (128 criteria from document 21)
T04	Intensity determination	Lite or Enterprise questionnaire with recorded result.	Phase 0, G3, R6	T01 module	01	1	Available v0.1
T05	Ambition classifier	Five questions for Optimise, Augment or Transform.	Phases 1, 2 and 7	T01 module	00, 12	1	Available v0.1

5.2 Risk, security and compliance

Code	Tool	Purpose	Where it is used	Format	Depends on	Priority	Status
T06	Risk matrix and register	Probability and impact assessment, heat map, inherent and residual risk, controls.	Phase 3, phase 6, portfolio	T01 module and spreadsheet template	33	2	Applied with P12 and P13
T07	Regulatory classifier	Guided questionnaire for classification under the AI Act and the assessments required.	Phases 0 and 3	HTML	34	2	Applied with P11

Code	Tool	Purpose	Where it is used	Format	Depends on	Priority	Status
T08	Nonconformity and incident register	Full process with time limits and alerts.	Phase 6, C4	T01 module	37	2	Applied with P26 and P27
T09	AI supplier register	Third parties, criticality, contracts, assessment and dependency.	Phases 3–4, C4	T01 module	36	3	Applied with P14
T10	Agent security assessment	Identity, permissions, intent-based access control, kill switch, injection testing.	Phases 4–6	Checklist in T03	35	3	Applied with P18 and the [AG] criteria in document 22

5.3 Value and measurement

Code	Tool	Purpose	Where it is used	Format	Depends on	Priority	Status
T11	Value hypothesis canvas and calculator	Baseline, formula, attribution method, stop criteria.	Phase 2	HTML and spreadsheet template	40	2	Applied with P08 and P09
T12	Value realisation tracking	Validated, declared and estimated value by period and by use case.	Phases 6–7, C4	T01 module	40, 43	2	Applied with P28
T13	Cost calculator per use case	Analytical allocation of licences, model consumption, compute and people.	Phases 3 and 6	Spreadsheet template	42	3	Applied with document 42
T14	Transformation index calculator	Eight signals, company profile and evolution.	C1, C5	HTML	12	2	Applied with document 12

5.4 Strategy and board

Code	Tool	Purpose	Where it is used	Format	Depends on	Priority	Status
T15	Maturity diagnosis	0–5 questionnaire by dimension with evidence and report.	C1, C5	HTML with report	11	2	Applied with document 1
T16	Portfolio sphere map	Heat map of spheres × ambition levels with investment and value.	C2, C3	Board dashboard view	10	2	Applied with document 1
T17	Board AI dashboard	Oversight: value, cost, risk, compliance, incidents, agility, adoption.	C4	Full and mobile HTML + JSON	60	1	Available. Fed from T01 to the connector <code>herramientas/T17_panel_connector/register (JSON)</code> plus <code>config_panel.json</code> (indic thresholds and lifecycle) dashboard JSON → full ai mobile dashboard, with a and time per stage as in :
T18	Board recommendations register	Recommendations with persistent identifier, status, evidence and assessment.	C4	HTML + JSON	62	1	Available. The T17 connector generates the register for recommendations in T01
T19	AI thesis and risk appetite template	Board decision document, with thresholds and reference time limits.	C2	Document template	13	3	Applied with document 1

5.5 People and operations

Code	Tool	Purpose	Where it is used	Format	Depends on	Priority	Status
T20	Adoption and capacity plan	Adoption, training and reassignment of released capacity.	Phases 4–7	Template and T01 module	23, 50	3	Applied with P20

Code	Tool	Purpose	Where it is used	Format	Depends on	Priority	Status
T21	Corporate AI use monitor	Assigned and active licences, unauthorised use, data leakage controls.	C4	Board dashboard view	31	3	Applied with document 31
T22	Retirement manager	Retirement plan, replacement, data and models, communication.	Phase 7	T01 module	14	3	Applied with P30

06

Build order

Wave	Tools	When	Result
Wave 1 · Core	T01 with T02, T03, T04 and T05; adaptation of T17 and T18 to be fed from the register.	After document 02 (Glossary), which sets names and lists.	Portfolio managed as a funnel, with tracked <i>gates</i> and a connected board dashboard.
Wave 2 · Full governance	T06, T07, T08, T11, T12, T14, T15, T16.	As documents 11, 12, 33, 34, 37 and 40 are completed.	Risk, compliance, value, maturity and transformation index operational.
Wave 3 · Complements	T09, T10, T13, T19, T20, T21, T22.	With documents 13, 14, 23, 31, 35, 36, 42 and 50.	Full coverage of the framework.

Working rule: **every document that defines a process involving a register, a calculation or a questionnaire specifies the associated tool**, and the tool is built or updated when that document is closed.
